New Methods in Social Justice Research for the Twenty-First Century Alphia Possamai-Inesedy 2013-09-13 This book provides a source of innovative theories and data for researchers grappling with social justice methodology and research methods in an environment constrained by funding agendas. This book foregrounds and promotes creativity and imagination within a critical frame of reference to challenge the status quo. It invites people into creative spaces for thinking about and researching 'the social'. With/in these spaces both the processes of social justice research (methodology) and the presentation of the research (re-presentation) are seen as being intertwined. This book explores methodologies which include, but are not limited to: writing as inquiry; performance ethnography; emotional geographies; arts-based inquiry; autoethnography; evocative inquiry; reader's theatre. This may include poetry, monologues, art, music, dance, and other creative mediums. Many of these methods are not new per se. What is new is the blurring of traditional research boundaries, for example between the social sciences and the arts, and the initial movement of these methods from the margins to the mainstream in the search for more successful ways to effect social justice outcomes. This book was published as a special issue of the International Journal of Social Research Methodology.

Behavioural Risks in Corporate Governance Ngozi Vivian Okoye 2015-03-05 Recent cases of corporate failures, including the fixing of LIBOR rates and money laundering issues in the banking industry, highlight how behavioural issues on the part of company directors are significant contributory factors in corporate governance and the success or failure of companies. This book examines how personality and behavioural issues have contributed to major corporate failures, and how this risk may be managed. The book examines behavioural risks in corporate governance, and evaluates the extent to which risk management mechanisms have acknowledged various aspects of behaviour. Drawing from cases in the UK, the US and Australia and research in psychology and the behavioural sciences, Ngozi Vivian Okoye argues that current corporate governance mechanisms lack provision for identifying and managing personality risks, and suggests how constituent elements of behaviour should be engaged with when developing preventive mechanisms for corporate failures. Okoye presents a conceptual framework for identifying and managing personality risks, and explores how personality risk may be built into corporate governance regulation. The book will be of great use and interest to researchers and practitioners in business and company law, corporate governance, and critical management studies.

Research Methodology C. R. Kothari 2019 This fourth multi colour edition has been made better equipped to make the learning more systematic. More details are added to old chapters keeping in mind the need of advanced data analysis in social science research. The usage of popular statistical package SPSS has also been shown through many examples. It is important to adopt an appropriate methodology in quality research. The present book provides the basic and advanced level discussion on research methodology so that the researchers may become familiar with the art of using research methods and techniques. The book is intended to serve as a textbook for social science students at graduate and postgraduate level. The book can be taken as a well organised guide for researchers in social science and other areas..

Technoscientific Research Roman Z. Morawski 2024-06-04 Unlike the bulk majority of publications on philosophy of science and research ethics, which are authored by professional philosophers and intended for philosophers, this book has been written by a research practitioner and intended for research practitioners. It is distinctive by its integrative approach to methodological and ethical issues related to research practice, with special emphasis of mathematical modelling and measurement, as well as by

attempted application of engineering design methodology to moral decision making. It is also distinctive by more than 200 real-world examples drawn from various domains of science and technology. It is neither a philosophical treaty nor a quick-reference guide. It is intended to encourage young researchers, especially Ph.D. students, to deeper philosophical reflection over research practice. They are not expected to have any philosophical background, but encouraged to consult indicated sources of primary information and academic textbooks containing syntheses of information from primary sources. This book can be a teaching aid for students attending classes aimed at identification of methodological and ethical issues related to technoscientific research, followed by introduction to the methodology of analysing dilemmas arising in this context.
