**Plant Microbiome: Interactions,  
Mechanisms of Action, and Applications,  
volume III** Alok Kumar Srivastava 2025-11-11

Due to the success of the original Research Topic and the following Volume II, we have decided to launch a Volume III of "Plant Microbiome: Interactions, Mechanisms of Action, and Applications". The relationship between plants and their surroundings, especially those plant-microbe interactions with a beneficial output, remain the center of considerable attention. Plants depend on their microbiomes for multifarious life-supporting activities, including nutrient acquisition and augmentation of their defense systems against biotic and abiotic stresses. The interactions between a plant and its microbiome are highly complex and dynamic in nature. The plant immune system in particular is thought to have a profound impact in determining the plant microbiome structure and diversity. Characterizing the plant microbiome and its function could be applied for better crop design and management, especially in resource-limited environments, and to protect plants from intruding pathogens. Therefore, a deep understanding of the interrelationships of the soil-plant-microorganism system is essential for improving the efficacy and potential applications of plant growth-promoting inocula for achieving sustainable food security and development. Recent studies of plant growth-promoting rhizobacteria show that cocktails of useful bacteria in the form of synthetic communities are better than single inoculants, which face competition from other microorganisms and could be killed or suppressed under sub-optimal conditions. Microbial activity should also be considered in the construction of microbial co-inoculants.

Understanding plant-microbe interactions and mechanisms will also help in the development of smart microbial fertilizer formulation and application in the future. This Research Topic welcomes the following subtopics: •

Interactomics for sustainable agriculture: studies using novel combinatorial approaches employing computational expertise to analyze the data from genomics, transcriptomics, metabolomics, and proteomics-based studies, leading to identification of targets and validating wet lab experiments with molecular evidence for resolving issues in agriculture and sustainability. Please note that purely descriptive sequencing studies will not be considered. • Plant microbiome studies deciphering the structure and composition of complex microbial communities associated directly or indirectly with the plant (i.e., endophytic, epiphytic, and rhizospheric communities) and their significance. Topic Editors Alok Kumar Srivastava and Prem Lal Kashyap have created commercial products related to the Topic. All other topic editors declare no competing interests with regard to the Research Topic subject.

**ACS General Chemistry Exam Prep Made Easy Academy** Don't buy just a book. Buy a system backed by brain science. You're standing at the exam room door with a semester of general chemistry crammed into your head — and no idea what will actually show up. Sound familiar? Most ACS prep resources hand you content and wish you luck. This one gives you a complete, neuroscience-backed 3-part learning system that tells you exactly what to study, how to study it, and how to prove you know it. Still blanking on quantum number rules under pressure? Spending hours on content that won't appear? Recognizing answers in practice but freezing when you have to generate them? That's not a knowledge problem. That's a method problem. This book fixes the method. Step 1: Read It — Build Your Foundation: Every Part opens with a comprehensive Study Guide before you touch a single problem. Each includes: -High-Yield Objectives -Key Terms -Concept Overview -Stepwise Pathways -Side-by-Side Breakdowns -Mnemonics -Must-Know Facts -Application Scenarios -Common Mistakes -2-Minute Rapid Review -Self-Assessment Checklist Three printable templates keep learning active as you go — Mind Map, Comparison Chart, and Cornell Notes — guided by an 11 Week Study Plan that tells you exactly what to do and when. All additionally available as printable PDFs via QR code. Step 2: Rhyme It — Lock It In; Memory

Compact rhyming poems transform everything from electron configuration rules to Le Chatelier's Principle into sequences your brain wants to store. The Made Easy Highlighting System tells you exactly what to highlight and why — six color-coded categories that turn your book into a visual memory map you can scan right up to exam day. Step 3: Remember It — Prove Mastery: Unlimited practice when you need it. A full exam simulation when you're ready. Unlimited Online Quiz Bank — 3 scenario-based questions per topic with detailed rationales for correct and incorrect answers. Scan the QR code and enter your access code from the back of the book Full-Length ACS-Format Exam Simulation — one complete timed exam mirroring real ACS structure, content distribution, and difficulty based on published blueprints. Not generic practice. The right content, the right proportions, the right format. Every element is grounded in Cognitive Load Theory, Retrieval Practice, Spaced Repetition, and Elaborative Encoding. Not because those are impressive words. Because they produce results. Eleven Parts. One system. Everything you need. You've got this. Made Easy Academy has got you.

New Approach Methods in Immunology Jeffrey John Bajramovic 2024-09-27 Currently, the assessment of functional immunological relevance is mainly done in animal models. Motivation to work on non-animal methods, or new approach methods (NAM), stems from economical and ethical considerations, and is supported by public pressure. Importantly, the translational gap between results obtained in animal studies and clinical trials in humans (the 'valley of death'), combined with the reproducibility crisis in science, also provide strong scientific arguments to work on novel, robust, human-based methodology. The field of immunology confronts NAM scientists with specific challenges. Firstly, immunological responses require several cell types in different locations for proper development and take considerable time to develop. Secondly, immunological responses in outbred humans are

characterized by genetic and functional variability. Still, the development and application of NAM are increasing rapidly, and the field is moving at such a fast pace that a special issue is timely. Our goal is to provide an overview of the current state-of-the-art regarding new approach methods or non-animal methods (NAM) in immunology. These should be inspired by the desire to mimic in vivo biology and describe e.g. challenges in mimicking immunological structures (like lymph nodes, bone marrow, local immune structures), immunological responses (systemic and local, innate and adaptive, B cells and T cells) and/or immunological processes (like maturation, trafficking, extravasation, immunotoxicity, affinity maturation).
