Connecting Mathematical Ideas Jo Boaler 2005 In math, like any subject, real learning takes place when students can connect what they already know to new ideas. In "Connecting Mathematical Idea"s, Jo Boaler and Cathy Humphreys offer a comprehensive way to improve your ability to help adolescents build connections between different mathematical ideas and representations and between domains like algebra and geometry. "Connecting Mathematical Ideas" contains two-CDs worth of video case studies from Humphreys' own middle-school classroom that show her encouraging students to bridge complex mathematical concepts with their prior knowledge. Replete with math talk and coverage of topics like representation, reasonableness, and proof, the CDs also include complete transcripts and study questions that stimulate professional learning. Meanwhile, the accompanying book guides you through the CDs with in-depth commentary from Boaler and Humphreys that breaks down and analyzes the lesson footage from both a theoretical and a practical standpoint. In addition to addressing the key content areas of middle school mathematics, Boaler and Humphreys pose and help you address a broad range of frequently asked pedagogical questions, such as: How can I organize productive class discussions? How do I ask questions that stimulate discussion and thought among my students? What's the most effective way to encourage reticent class members to speak up? What role should student errors play in my teaching? Go inside real classrooms to solve your toughest teaching questions. Use the case studies and the wealth of professional support within "Connecting Mathematical Ideas" and find new ways to help your students connect with math.

Mathematical Connections Bruce Pollack-Johnson 1998 Volume I is appropriate for undergraduate math courses in single-variable Business Calculus (including Brief Calculus). Volume II is a follow-up covering finite math topics, multivariable calculus, and least squares regression. Appropriate as the 2nd semester materials to a Math for Business course. The text's overall approach is problem-driven with topics motivated and developed using interesting and useful real-world examples, many from actual student projects. The focus of the text is on the entire process of problem-solving, including the formulation and validation of mathematical models. It emphasizes conceptual understanding so students can use techniques and technology intelligently as a tool for solving real problems. (Graphing calculator and/or spreadsheet are recommended.)

Connecting Mathematics and Science to Workplace Contexts

Edward Britton 1999-06-23 Engage students through real-world curriculum It's no accident that employers complain that newly minted graduates are out of touch with the realities of work demands! Too often, there is a disconnect between what is taught in the classroom and what is demanded in the workplace, and students suffer the consequences. Mathematics and science curricula can play a critical role in solving this dilemma. In this comprehensive review of 23 exemplary curricula/programs, the authors offer an easy-to-use guide for tying curriculum to workplace experiences—from a hematology laboratory to an agricultural setting to a soda bottling company—these programs illustrate concrete real-life situations to which students can relate and derive motivation. Learn how to: Meet the goals of science, mathematics, and technology education Meet national curriculum standards Chart key characteristics of successful curricula Connect curriculum to workplace contexts Create your own curriculum materials This book is a must for mathematics and science educators, curriculum developers and supervisors, and educators in school-to-work programs and vocational courses.
