Computer Methods for Architects R A

Reynolds 2014-05-20 Computer Methods for
Architects deals with the use of computers in the
architecture profession. The text explores where
and how computers can and cannot help. The
book begins with an explanation of how the
majority of the architects around the world were
once reluctant to use a computer. It then
discusses how some architects improved and
advanced the use of computers in the profession.
The next part of the book discusses the
advantages that a computer can offer an
architect, as well as some disadvantages. The
next chapter talks about how a computer can
handle the files of an entire office. Discussions
on the computer's database, proper selection of
programs, and simulation techniques are also
included in the book. The text finally talks about
what the future may hold for computers and
architects. This book caters to architects, as it
talks about what a person in the field could
encounter while using computers.
