The Copyright Law of Spatial Data Kanchana Kariyawasam

2024-08-09 This book provides a thorough comparative analysis of copyright protection of spatial data across Australia, the United States of America (USA), and the European Union. With the emergence of terrestrial scanners, drones, robotics, and artificial intelligence (AI), the acquisition of data has recently reshaped the landscape of the survey industry, highlighting the importance of protecting the intellectual rights of surveyors. This book investigates the distinct approaches taken by each jurisdiction in protecting copyrights in spatial data and explores commonalities and disparities between these jurisdictions, highlighting best practices. The book also explores the alternative means of protecting spatial data and provides final recommendations aimed at policymakers, with the overarching objective of nurturing a balanced copyright system. This book will be of interest to students and scholars in the field of copyright law and spatial data.

Pivoting and Producing for Online TV Alexa Scarlata 2025-05-02 The introduction and diffusion of international subscription video-on-demand (SVOD) services in the 2010s represented the most significant disruption of established national broadcast and pay-TV ecologies in their long history. Using an in-depth Australian case study, this book narrates this profound period of proliferation. It also considers how incumbent commercial networks, pay-TV providers and public service broadcasters developed into online TV providers, albeit in assorted ways. In so doing, it conceives of the early impact of online TV (2015–2020) more broadly and acknowledges the role of both new and old TV players. The industry-wide shift towards online TV over this period also impacted existing television drama production cultures. SVOD services provided a fruitful avenue for the distribution of existing archives and slowly began to support the production of new Australian content with an increasingly

global focus. However, the formal arrival of online TV certainly did not usher in the boom in original local television drama many anticipated. **Pivoting and Producing for Online TV: Australia's Transition** advances the macro-analysis of television production strategies. This book will be useful to students and researchers interested in media, film, and cultural studies.

Turning Off the Television Jock Given 2003 Explores the constant shifts in the technologies, business models and social uses of TV and radio, and explains the aspects of broadcast media which have attracted so much government policy attention, as well as what might happen to them in future.

Television & Cable Factbook 2006

Copyright Perspectives Brian Fitzgerald 2015-05-23 This book provides international and domestic perspectives on the law of copyright and is led by a foreword on the future of copyright by Dr Francis Gurry, Director General of WIPO and a chapter on the lessons for copyright policy in classical Roman law, by Justice Arthur Emmett. The body of this collection covers current perspectives in the digital age, from the application of the Berne Convention, to time shifting and intermediary copyright liability, as well as perspectives from developing and developed countries covering laws, user rights, open access, government use of copyright material and the use of the criminal law to proscribe copyright infringement.

AI 2005: Advances in Artificial Intelligence Shichao Zhang 2005-11-27 The 18th Australian Joint Conference on Artificial Intelligence (AI 2005) was held at the University of Technology, Sydney (UTS), Sydney, Australia from 5 to 9 December 2005. AI 2005 attracted a historical record number of submissions, a total of 535 papers. The review process was extremely selective. Out of these 535 submissions, the Program Chairs selected only 77 (14.4%) full papers and 119 (22.2%) short papers

based on the review reports, making an acceptance rate of 36.6% in total. Authors of the accepted papers came from over 20 countries. This volume of the proceedings contains the abstracts of three keynote speeches and all the full and short papers. The full papers were categorized into three broad sections, namely: AI foundations and technologies, computational intelligence, and AI in specialized domains. AI 2005 also hosted several tutorials and workshops, providing an interacting mode for specialists and scholars from Australia and other countries. Ronald R. Yager, Geoff Webb and David Goldberg (in conjunction with ACAL05) were the distinguished researchers invited to give presentations. Their contributions to AI 2005 are really appreciated.

The Economics of the Mass Media Gillian Doyle 2006 The study of the mass media has flourished over recent decades. Whereas media and communications have traditionally been studied via the lens of sociology or other non-economic disciplines, the perspectives and frameworks offered by economics are now properly recognised as central to our understanding of the organization and behaviour of the mass media - a fact reflected in this unique collection. As more and more economists have turned their attention to media firms and industries, a rich and diverse body of literature has emerged. The articles drawn together in this volume present a survey of the papers that have contributed in important ways to this developing field of enquiry.

Media Firms Robert G. Picard 2014-04-04 Media Firms presents studies applying the company level approach to media and communication firms. It explores differences among missions, strategies, organizational choices, and other business decisions. Reviewing economic factors and pressures on media and communications companies, this book seeks to improve understanding of how these elements affect market and company structures, operations, and performance of firms. The chapters, written by leading scholars worldwide, were selected from papers on the theme of media firms presented at the 5th World Media Economics Conference hosted by the Turku School of Economics and Business Administration and The Journal of Media Economics. The collected studies provide: *an overview of economic and related managerial issues affecting the structures of markets in which firms compete; *the operations of media and communications firms; and *their financial performance. As a result, it expands the discussion of economic issues traditionally associated with the field due to narrowed focus of initial books in media economics. It is hoped that this book will induce additional avenues of inquiry regarding such issues.
