Safer Surgery Lucy Mitchell 2017-05-15

Operating theatres are very private workplaces. There have been few research investigations into how highly trained doctors and nurses work together to achieve safe and efficient anaesthesia and surgery. While there have been major advances in surgical and anaesthetic procedures, there are still significant risks for patients during operations and adverse events are not unknown. Due to rising concern about patient safety, surgeons and anaesthetists have looked for ways of minimising adverse events. Behavioural scientists have been encouraged by clinicians to bring research techniques used in other industries into the operating theatre in order to study the behaviour of surgeons, nurses and anaesthetists. Safer Surgery presents one of the first collections of studies designed to understand the factors influencing safe and efficient surgical, anaesthetic and nursing practice. The book is written by psychologists, surgeons and anaesthetists, whose contributions combine to offer readers the latest research techniques and findings from some of the leading investigators in this field. It is designed for practitioners and researchers interested in understanding the behaviour of operating theatre team members, with a view to enhancing both training and practice. The material is also suitable for those studying behaviour in other areas of healthcare or in high-risk work settings. The aims of the book are to: a) present the latest research on the behaviour of operating theatre teams b) describe the techniques being used by psychologists and clinicians to study surgeons, anaesthetists and theatre nurses' task performance c) outline the safety implications of the research to date.

Comprehensive Healthcare Simulation:

Implementing Best Practices in Standardized

Patient Methodology Gayle Gliva-McConvey

2020-10-15 This book brings to life best

practices of Human Simulation; maximizing the Standardized Patient (SP) methodology that has played a major role in health professions learning and assessment since the 1960s. Each chapter reflects the Association of SP Educators Standards of Best Practices (SOBPs) and provides guidance for implementation. Multiple insights are offered through embedded interviews with international experts to provide examples illustrating successful strategies. The Human Simulation Continuum Model, a practical and theoretical framework, is introduced to guide educators in decision-making processes associated with the full range of human simulation. The Continuum Model spans improvisations, structured role-play, embedded participants, and simulated-standardized patients. This book also provides the full "how-to" for SP methodology covering topics including; case/scenario development, creating training material, training techniques for case portrayal, training communication and feedback skills, GTA/MUTA/PTA training, SP program administration and professional development for SP Educators. A pragmatic, user-friendly addition to the Comprehensive Healthcare Simulation series, Implementing Best Practices in Standardized Patient Methodology is the first book framed by the ASPE SOBPs, embracing best practices in human simulation and marshaling the vast expertise of a myriad of SP Educators.

Traversing Transnational Biomedical

Landscapes Judith Schühle 2020-04-02 In the age of globalization, the transnational dimension of sciences like medicine seems to be given.

However, the agents connecting different parts of this transnational biomedical landscape have yet to receive their due attention. Situated at the intersection of contemporary debates as well as theories of medical anthropology and migration in the 21st century, this book explores the experiences of Nigerian trained physicians who migrated to the US and the UK within the last 40 years. By drawing on individual professional life stories, Judith Schühle illuminates how these physicians disconnect from and (re)connect to diverse local social and biomedical contexts, becoming established abroad while at the same time trying to influence health care services in Nigeria through transnational endeavors.

Artificial Intelligence in Public Health Min Wu 2026-04-15 This book explains how artificial intelligence (AI) works and helps readers adopt, use, and evaluate AI applications in public health. It serves as an introduction to AI literacy for beginners without a prerequisite for a math or information technology background. The conceptual frameworks for AI in public health also serve well for future agentic AI design. With the help of this textbook, instructors will be able to teach students the fundamental concepts and skills to identify unmet needs in public health and implement AI as part of their solutions. This book addresses evaluation issues for AI in public health that other books have not. The meta-AI homework with grading metrics provides metacognitive approaches for AI-human interactions. The book features 11 chapters organized in six parts: Part I introduces AI and explains why we need it in public health (AI literacy courses). Part II explains design/evaluation models of AI applications in public health. Part III discusses big data in public health, which is the foundation of AI applications (data awareness courses). Part IV focuses on case studies of usage of AI applications in public health (e.g., EquiRisk (Equity aware risk stratifications), PMCO-AI (Personalized Motivation, Capability and Opportunity empowered by AI), and PAPO (Policy Aware Personalized Opportunities)) Part V concerns living with AI, including education of the public health workforce. Part VI discusses the future of AI in public health, including challenges and opportunities. *Artificial Intelligence in Public Health* is timely and essential reading for public health students and staff interested in improving their AI literacy and embracing this disruptive technology that could transform the field. It can be used as a core text for students in public health informatics BS/MS/PhD or certificate programs. It can also be used as a secondary text for students in BS/MS programs in schools of public health or students in health informatics/biomedical

informatics programs with a public health concentration. Practitioners in public health agencies at different levels (federal, state, county, city, town, community) and researchers in public health informatics may also find the book useful for their work.
