Pond Conservation in Europe Beat Oertli

2010-09-24 Ponds are an exceptional freshwater resource around the world and represent thirty percent of the global surface area of standing water. Furthermore, the millions of ponds which exist exhibit a particularly high biodiversity and have a high potential for ecosystem functions and services. Despite these impressive features, ponds face many threats from a variety of human activities and receive little or no protection under European and national legislation. Consequently, there is an urgent need to protect, consolidate and increase the pond resource in Europe. In order to achieve these objectives, the European Pond Conservation Network (EPCN) was launched 2004 in Geneva.

Its aim is to promote the awareness, understanding and conservation of these small water bodies in the European landscape. This volume of "Developments in Hydrobiology" presents a selection of 31 papers presented during EPCN conferences held in 2006 in France (Toulouse) and in 2008 in Spain (Valencia). They represent a diverse collection of themes from across the continent and North Africa and present new and original insights into topics as wide ranging as pond biodiversity; human disturbance; landscape ecology; ecological assessment and monitoring; practical management measures; ecological restoration; hydrology and climate change; invasive species and threatened species.

Advanced Pre-Med Studies Parent Lesson

Plan 2013-08-01 Advanced Pre-Med Studies Course Description Semester 1: From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In *Exploring the History of Medicine*, author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in

this book, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs*. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. Semester 2:

Body by Design defines the basic anatomy and physiology in each of 11 body systems from a creationist viewpoint. Every chapter explores the wonder, beauty, and creation of the human body, giving evidence for creation, while exposing faulty evolutionist reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries, while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body. Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as

taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process.

Science of Life: Biology Parent Lesson Plan
2013-08-01 The Science of Life: Biology Course
Description This is the suggested course
sequence that allows one core area of science to
be studied per semester. You can change the
sequence of the semesters per the needs or
interests of your student; materials for each
semester are independent of one another to
allow flexibility. Semester 1: Intro to Science
Have you ever wondered about human fossils,
“cave men,” skin color, “ape-men,” or why
missing links are still missing? Want to discover
when T. Rex was small enough to fit in your
hand? Or how old dinosaur fossils are-and how
we know the age of these bones? Learn how the
Bibles’ world view (not evolution’s) unites

evidence from science and history into a solid
creation foundation for understanding the origin,
history, and destiny of life-including yours! In
Building Blocks in Science, Gary Parker explores
some of the most interesting areas of science:
fossils, the errors of evolution, the evidences for
creation, all about early man and human origins,
dinosaurs, and even “races.” Learn how
scientists use evidence in the present, how
historians use evidence of the past, and discover
the biblical world view, not evolution, that puts
the two together in a credible and scientifically-
sound way! Semester 2: Life Science Study clear
biological answers for how science and Scripture
fit together to honor the Creator. Have you ever
wondered about such captivating topics as
genetics, the roll of natural selection, embryonic
development, or DNA and the magnificent
origins of life? Within Building Blocks in Life
Science you will discover exceptional insights
and clarity to patterns of order in living things,
including the promise of healing and new birth
