**Physical Chemistry for the Biosciences** Raymond Chang 2005-02-11

This book is ideal for use in a one-semester introductory course in physical chemistry for students of life sciences. The author's aim is to emphasize the understanding of physical concepts rather than focus on

precise mathematical development or on actual experimental details.

Subsequently, only basic skills of differential and integral calculus are required for understanding the equations. The end-of-chapter problems have both physiochemical and biological applications.

**The Maple V Handbook** Martha L. Abell 1994 An exhaustive reference work and a valuable addition to every Maple V owner's library. Each of the more than 2,500 functions in this guide are covered in alphabetical order, with a separate section devoted to graphics-related functions.

Every listing includes an explanation of functionality, annotated examples, and numerous cross-references.

Differential Equations with Maple V® Martha L. Abell 2014-05-09

Differential Equations with Maple V provides an introduction and discussion of topics typically covered in an undergraduate course in ordinary differential equations as well as some supplementary topics such as Laplace transforms, Fourier series, and partial differential equations. It also illustrates how Maple V is used to enhance the study of differential equations not only by eliminating the computational difficulties, but also by overcoming the visual limitations associated with the solutions of differential equations. The book contains chapters that present differential equations and illustrate how Maple V can be used to solve some typical problems. The text covers topics on differential equations such as first-order ordinary differential equations, higher order differential equations, power series solutions of ordinary differential equations, the Laplace Transform, systems of ordinary differential equations, and Fourier Series and applications to partial differential equations. Applications of these topics are also provided. Engineers,

computer scientists, physical scientists, mathematicians, business professionals, and students will find the book useful.

**First Leaves: A Tutorial Introduction to Maple V** Bruce W. Char  
2012-12-06 This tutorial shows how to use Maple both as a calculator with instant access to hundreds of high-level math routines and as a programming language for more demanding tasks. It covers topics such as the basic data types and statements in the Maple language. It explains the differences between numeric computation and symbolic computation and illustrates how both are used in Maple. Extensive "how-to" examples are used throughout the tutorial to show how common types of calculations can be expressed easily in Maple. The manual also uses many graphics examples to illustrate the way in which 2D and 3D graphics can aid in understanding the behavior of functions.
