Value Chain Analysis of Groundnut TIZAZU AMBAW 2020-02-06 Academic Paper from the year 2019 in the subject Agrarian Studies, grade: Good, Bahir Dar University (College of Agriculture and Environmental Science), course: Agricultural economics, language: English, abstract: This study was aimed at analyzing value chain of Groundnut in Pawi Woreda, Metekel Zone, Beni-shangul Gumuz Region with specific objectives of identifying groundnut value chain and examining the performance of actors in the chain; analyzing the determinants of groundnut supply to the market in the study area; and identifying and map marketing channels. The data were collected from both primary and secondary sources. The primary data for this study were collected from 155 farmers, 30 traders and 25 consumers through using questionnaires. Descriptive statistics and Econometrics models were used to analyze the collected data. Results show that the main groundnut value chain actors in the study area groundnut producers/farmer, input suppliers, local assembler, wholesalers, retailers, Processers and consumers. It is also found out that groundnut passes through several intermediaries with little value being added before reaching the end users. The chain is governed by wholesalers and Processers who have capital advantage over the other chain actors. Therefore, farmers are forced to capture a lower share of profit margin. The result of OLS regression model indicated that marketable supply is significantly affected by sex of household head, age of household head, agricultural extension service, owner ship of transport facility, distance of the nearest market and quantity of groundnut produced. Therefore, policy aiming at increasing farmers' access to modern inputs, developing and improving infrastructure, gender consideration, and improving extension system are recommended to accelerate the chain's development.

Managing Supply Chain Risk and Vulnerability Teresa Wu 2009-08-20 Managing Supply Chain Risk and Vulnerability, a book that both practitioners and students can use to better understand and manage supply chain risk, presents topics on decision making related to supply chain risk. Leading academic researchers, as well as practitioners, have contributed chapters focusing on developing an overall understanding of risk and its relationship to supply chain performance; investigating the relationship between response time and disruption impact; assessing and prioritizing risks; and assessing supply chain resilience. Supply chain managers will find Managing Supply Chain Risk and Vulnerability a useful tool box for methods they can employ to better mitigate and manage supply chain risk. On the academic side, the book can be used to teach senior undergraduate students, as well as graduate-level students. Additionally, researchers may use the text as a reference in the area of supply chain risk and vulnerability.

Exploring the first agro-food European case of blockchain application for supply chain management, this research work is among the pioneers in analysing the interaction between this new technology and traditional management accounting and control practices.

Groundwater Resource Assessment for Town Water Supply in South Africa. The Case of Steynsrus in the Free State Province Lebogang Malefane 2020-08-17 Master's Thesis from the year 2016 in the subject Geography / Earth Science - Geology, Mineralogy, Soil Science, grade: 3.4, University of the Free State (Institute for Groundwater Studies), course: Geohydrological Masters Programme, language: English, abstract: Groundwater resource assessment aims to obtain fundamental data and information needed to describe the hydraulic and chemical parameters in order to estimate the available groundwater resource which is suitable for drinking. This study was undertaken with the purpose of determining and estimating the groundwater occurrence, groundwater flow parameters, groundwater quality and storage in typical Karoo Main Basin aquifers such as in the Steynsrus study area in South Africa. The field investigations were designed to define and determine the sustainable yields and the properties of the aquifers and the exploitable volumes. The research places emphasis on the appropriate tools and their applications in order to understand the local aquifers so as to optimise the groundwater exploration for town water use and to determine the future water use. The geophysical surveying methods, particularly the magnetic method, were utilised to investigate and determine borehole drilling targets, and to locate groundwater potential structures, which are often associated with high borehole yields. The quality of the magnetic data utilised for drilling by the external consultant was critically evaluated and was found to be 'bad data'. Percussion drilling played an important role in providing geological subsurface information; in particular locations of fractures which are often associated with favourable groundwater flow were identified. Seventeen (17) boreholes were drilled in the whole project, seven (7) of the boreholes were sited by magnetometer survey and interpretation, and ten (10) of the drilled boreholes were sited by geological mapping and map interpretation. Twelve of the drilled boreholes were declared 'unsuccessful' due to yielding a blow yield below 1.00 L/s; therefore these boreholes were not considered for aquifer pump testing. Blow yields of five (5) of the newly drilled boreholes were between 1.5 and 24 L/s. Based on these findings, the aquifers in the study were concluded to be a fractured system of alternating layers of sandstone and shale formations, characterised by the favourable groundwater flow characteristics at the dolerite fractures, and in some cases bedding plane fractures of sandstone formations. The study demonstrates the value in the methods and concepts applied in geohydrological studies to understand the local aquifer properties and in order to estimate the sustainable yields and the groundwater balance.

Whether you're in sales, HR, or product development, the decisions you make every day can impact the supply chain. This book shows you how to factor broader impact into your decision making process based on your place in the system. Improve processes by determining your metrics Choose the right software and implement appropriate automation Evaluate and mitigate risks at all steps in the supply chain Help your business function as a system to more effectively meet customer needs We tend to think of the supply chain as suppliers, logistics, and warehousing—but it's so much more than that. Every single person in your organization, from the mailroom to the C-suite, can work to enhance or hinder the flow.
