Discovering the Universe William J. Kaufmann
2008-12-26 *Discovering the Universe: From the Stars to the Planets* engages students with an inquiry-based exploration of the universe and the scientific process. Developed with a “big picture” approach, the text first explains how the stars, the galaxies, and the entire universe formed, and then discusses planets and other components of our solar system. Students follow this natural conceptual progression within a proven learning method designed to address misconceptions and build a deep understanding of science and the world around us.

Discovering the Universe Charles E. Long 1980
Strategy for the Detection and Study of Other Planetary Systems and Extrasolar Planetary Materials National Research Council 1990-02-01
This volume addresses a new opportunity in the planetary sciences “to extend our exploration outward to discover and study planetary systems that may have formed or are forming around other stars. It concludes that a coordinated program of astronomical observation, laboratory research, theoretical development, and understanding of the dynamics and origins of whatever may be found would be a technologically feasible and potentially richly rewarding extension of the study of bodies within the solar system.
