A Problem-Solving Approach to Aquatic Chemistry James N. Jensen 2023-01-05

A Problem-Solving Approach to Aquatic Chemistry Enables civil and environmental engineers to understand the theory and application of aquatic equilibrium chemistry. The second edition of A Problem-Solving Approach to Aquatic Chemistry provides a detailed introduction to aquatic equilibrium chemistry, calculation methods for systems at equilibrium, applications of aquatic chemistry, and chemical kinetics. The text directly addresses two required ABET program outcomes in environmental engineering: "... chemistry (including stoichiometry, equilibrium, and kinetics)" and "material and energy balances, fate and transport of substances in and between air, water, and soil phases." The book is very student-centered, with each chapter beginning with an introduction and ending with a summary that reviews the chapter's main points. To aid in reader comprehension, important terms are defined in context and key ideas are summarized. Many thought-provoking discussion questions, worked examples, and end of chapter problems are also included. Each part of the text begins with a case study, a portion of which is addressed in each subsequent chapter, illustrating the principles of that chapter. In addition, each chapter has an Historical Note exploring connections with the people and cultures connected to topics in the text. A Problem-Solving Approach to Aquatic Chemistry includes: Fundamental concepts, such as concentration units, thermodynamic basis of equilibrium, and manipulating equilibria. Solutions of chemical equilibrium problems, including setting up the problems and algebraic, graphical, and computer solution techniques. Acid-base equilibria, including the concepts of acids and bases, titrations, and alkalinity and acidity. Complexation, including metals, ligands, equilibrium calculations with complexes, and applications of complexation chemistry.

Oxidation-reduction equilibria, including equilibrium calculations, graphical approaches, and applications. Gas-liquid and solid-liquid equilibrium, with expanded coverage of the effects of global climate change. Other topics, including chemical kinetics of aquatic systems, surface chemistry, and integrative case studies. For advanced/senior undergraduates and first-year graduate students in environmental engineering courses, A Problem-Solving Approach to Aquatic Chemistry serves as an invaluable learning resource on the topic, with a variety of helpful learning elements included throughout to ensure information retention and the ability to apply covered concepts in practical settings.

Nielsen's Food Analysis Laboratory Manual B. Pam Ismail 2024-06-20 This fourth edition laboratory manual was written to accompany Nielsen's Food Analysis, Sixth Edition, by the same authors. New to this fourth edition of the laboratory manual are three new chapters that complement both the textbook chapters and the laboratory exercises. The book again contains four introductory chapters that help prepare students for doing food analysis laboratory exercises. The 26 laboratory exercises in the manual cover 24 of the 35 chapters in the textbook. Many of the laboratory exercises have multiple sections to cover several methods of analysis for a particular food component or characteristic. Most of the laboratory exercises include the following: background, reading assignment, objective, principle of method, chemicals, reagents, precautions and waste disposal, supplies, equipment, procedure, data and calculations, questions, and references. This laboratory manual is ideal for the laboratory portion of undergraduate courses in food analysis.

How Molecular Forces and Rotating Planets

Create Life Jan Spitzer 2021-02-09 A reconceptualization of origins research that exploits a modern understanding of non-covalent molecular forces that stabilize living prokaryotic cells. Scientific research into the origins of life

remains exploratory and speculative. Science has no definitive answer to the biggest questions--"What is life?" and "How did life begin on earth?" In this book, Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non-covalent molecular forces and covalent bond formation--a physicochemical approach propounded originally by Linus Pauling and Max Delbrück. Spitzer develops the Pauling-Delbrück premise as a physicochemical jigsaw puzzle that identifies key stages in life's emergence, from the formation of first oceans, tidal sediments, and proto-biofilms to progenotes, proto-cells and the first cellular organisms.

General Chemistry James E. Brady 1986 The Fifth Edition retains the pedagogical strengths that made the previous editions so popular, and has been updated, reorganized, and streamlined. Changes include more accessible introductory chapters (with greater stress on the logic of the periodic table), earlier introduction of redox reactions, greater emphasis on the concept of energy, a new section on Lewis structures, earlier introduction of the ideal gas law, and a new development of thermodynamics. Each chapter ends with review questions and problems.

Biochar for Environmental Remediation Willis Gwenzi 2025-01-31 Biochar for Environmental Remediation: Principles, Applications, and Prospects synthesizes state-of-the-art knowledge on biochar-based systems for environmental remediation. This book examines a wide variety of biochar applications for the remediation of inorganic, organic, microbial, and emerging contaminants in various environmental media, including drinking water, industrial wastewater, urban stormwater, industrial and indoor air

pollution, and contaminated lands and soils. An increasing body of evidence shows that biochars have potential applications in environmental remediation of contaminants in soils, aqueous systems, and air pollution control. This book uses a systematic approach, covering biochar preparation, properties and characteristics, removal mechanisms, industrial applications, regeneration and disposal of spent biochar, life cycle analysis, and environmental and human health risks. Researchers, engineers, and graduate students will find this to be a valuable reference for understanding opportunities for the use of biochar in environmental remediation as it fills the gaps in existing literature and offers a clear roadmap to guide future research. - Addresses the whole biochar cycle from preparation, principles of application, industrial application domains, regeneration, recycling and final disposal, life cycle analysis, and environmental and human health risks - Covers a broad range of inorganic, organic, microbial, and emerging contaminants, providing a one-stop source of biochar information - Presents applications of biochar in the remediation of diverse environmental media, including drinking water, industrial, wastewater, urban stormwater, acid mine drainage, contaminated lands and soils, and industrial and indoor air pollution control

Olmsted/Burk is an introductory general chemistry text designed specifically with Canadian professors and students in mind. A reorganized Table of Contents and inclusion of SI units, IUPAC standards, and Canadian content designed to engage and motivate readers distinguish this text from many of the current text offerings. It more accurately reflects the curriculum of most Canadian institutions. Instructors will find the text sufficiently rigorous while it engages and retains student interest through its accessible language and clear problem solving program without an excess of material that makes most text appear daunting and redundant.

Aqueous Environmental Geochemistry Donald Langmuir 1997 This book offers thorough, up-to-date coverage of controls on the chemical

quality of surface and subsurface waters, both pristine and polluted, with an emphasis on problem-solving and practical applications. The text is appropriate for courses in aqueous geochemistry or aquatic chemistry. Desirable prerequisites are introductory courses or the equivalent in thermodynamics and solution chemistry, and in physical geology including mineralogy.
