Experiments in Java Samuel A. Rebelsky 2000 This lab manual is appropriate for any Introduction to Programming course that uses the Java programming language. Its hands-on exercises are intended to help students improve their understanding of the fundamental structures in Java. The order of the topics in this manual reflects an objects-first approach with the goal of helping students understand the object-oriented paradigm. This manual is divided into three parts. The first part presents the core of the Java language. These six sessions provide experience with core features and principles of the Java programming language. They provide enough breadth and depth for readers to learn more of Java on their own or in later courses. The second part of the manual helps students explore issues pertaining to algorithms. Recursion is considered here, as well important searching algorithms. Finally, methods of algorithm analysis are examined. The final part of the manual covers a number of additional topics that are not described in the core sessions such as graphics, inheritance, and object design. Features Includes eighteen laboratories, each with: Introductory Material New Skills that students will develop in the exercise Prerequisite Skills to ensure students are prepared for the session Required Files to use, modify, and extend in the exercises Discussion of topics covered in the laboratory session Experiments to reinforce the discussion Post-Laboratory Problems to enhance understanding Notes on selected problems Focuses on applications, but includes optional material on applets Provides an objects-first approach to working with Java Written on the Java 2 platform Designed to work with any Java textbook 0201612674B04062001

Theoretical Aspects of Computer Software Naoki Kobayashi 2003-06-30 This volume constitutes the proceedings of the Fourth International Symposium on Theoretical Aspects of Computer Software (TACS 2001) held at Tohoku University, Sendai, Japan in October 2001. The TACS symposium focuses on the theoretical foundations of programming and their applications. As this volume shows, TACS is an international symposium, with participants from many different institutions and countries. TACS 2001 was the fourth symposium in the TACS series, following TACS'91, TACS'94, and TACS'97, whose proceedings were published as Volumes 526, 789, and 1281, respectively, of Springer-Verlag's Lecture Notes in Computer Science series. The TACS 2001 technical program consisted of invited talks and contributed talks. In conjunction with this program there was a special open lecture by Benjamin Pierce; this lecture was open to non-registrants. TACS 2001 benefited from the efforts of many people; in particular, members of the Program Committee and the Organizing Committee. Our special thanks go to the Program Committee Co-chairs: Naoki Kobayashi (Tokyo Institute of Technology) Benjamin Pierce (University of Pennsylvania).

A Laboratory Course in Java Nell B. Dale 2000 Spending time actively programming on a computer is the most important part of a programming class. Dale originally developed lab manuals as part of self-paced learning packages. This manual is an ideal companion to Dale/Weems/Headington, Introduction to Java and Software Design. It maps to the chapter order of this textbook. It focuses on teaching syntax rules for Java functions and contains three types of activities: Prelab, Inlab, and Postlab, all designed within a closed laboratory setting. Java was not designed with the beginning student in mind, therefore closed laboratory activities are essential for students to understand the syntax and semantics of each construct as they progress. A diskette with programs, program shells, and data files accompanies the manual.

Invitation to Computer Science G. Michael Schneider 2006 This new edition of Invitation to Computer Science follows the breadth-first guidelines recommended by CC2001 to teach computer science topics from the ground up. The authors begin by showing that computer science is the study of algorithms, the central theme of the book, then move up the next five levels of the hierarchy: hardware, virtual machine, software, applications, and ethics. Utilizing rich pedagogy and a consistently engaging writing style, Schneider and Gersting provide students with a solid grounding in theoretical concepts, as well as important applications of computing and information technology. A laboratory manual and accompanying software is available as an optional bundle with this text.
