NoSQL for Mere Mortals Dan Sullivan 2015 NoSQL for Mere Mortals is an easy, practical guide to succeeding with NoSQL in your environment. Students are guided step-by-step through choosing technologies, designing high-performance databases, and planning for long-term maintenance. The author introduces each type of NoSQL database, shows how to install and manage them, and demonstrates how to leverage their features while avoiding common mistakes that lead to poor performance and unmet requirements. He uses four popular NoSQL databases as reference models: MongoDB, a document database; Cassandra, a column family data store; Redis, a key-value database; and Neo4j, a graph database.

Doing Document Analysis

Kristin Asdal 2021-12-08

Uniting methods from

disciplines across the social sciences and humanities, this hands-on guide develops a novel approach to doing document analysis. The authors present a framework for studying documents that enables you to conduct a rich and systematic analysis of documents in all their diversity. Focussing on document analysis both in practice and as practice, the book provides you with an innovative and versatile toolkit for analysing print and digital documents. It also: Highlights the impacts of digitalisation on documents themselves and the methods used to study them Has a strong focus on research ethics and critical engagement with digital sources Offers practical guidance on preparing and doing a document analysis research project. The book offers insightful perspectives both on the indispensable role of documents in our society and practical advice on how

you can best analyse documents and their significance.

Intelligence and Security Informatics Hsinchun Chen
2003-08-03 Since the tragic events of September 11, 2001, academics have been called on for possible contributions to research relating to national (and possibly international) security. As one of the original founding mandates of the National Science Foundation, mid- to long-term national security research in the areas of information technologies, organizational studies, and security-related public policy is critically needed. In a way similar to how medical and biological research has faced significant information overload and yet also tremendous opportunities for new innovation, law enforcement, criminal analysis, and intelligence communities are facing the same challenge. We believe, similar to “medical informatics” and “bioinformatics,” that there is a pressing need to develop the science of “intelligence and

security informatics” - the study of the use and development of advanced information technologies, systems, algorithms and databases for national security related applications, through an integrated technological, organizational, and policy-based approach. We believe active “intelligence and security informatics” research will help improve knowledge discovery and dissemination and enhance information sharing and collaboration across law enforcement communities and among academics, local, state, and federal agencies, and industry. Many existing computer and information science techniques need to be reexamined and adapted for national security applications. New insights from this unique domain could result in significant breakthroughs in new data mining, visualization, knowledge management, and information security techniques and systems.

Primary Sources: Investigating Geography Kit 2011-01-20

Primary Sources help teachers integrate authentic resources into the classroom. Primary sources capture students' curiosity about the past, so they naturally begin to use critical thinking to analyze historical events. This kit expands the study of geography beyond the confines of the classroom, builds visual literacy, critical-thinking skills, and global awareness.

Investigating Geography kit includes: Eight Photograph Cards including Expanding desert in Somalia; Blood Falls in Antarctica; Greater Sudbury Superstack in Canada; and more; Eight Primary Sources including NASA satellite image of the Gulf of Mexico oil spill; Monitoring the rainforest in the Congo with GIS; Demographic transition model; and more; Teacher's Guide including lesson plans, student activities, and document-based assessments; and Digital resources including student reproducibles and additional primary sources.
