Novel Mechanisms Involved in Urinary Bladder Control: Advances in Neural, Humoral and Local Factors Underlying Function and Disease, volume III Monica Akemi Sato 2025-04-10 This Research Topic is part of the 'Novel Mechanisms Involved in Urinary Bladder Control: Advances in Neural, Humoral and Local Factors Underlying Function and Disease' series: - Novel Mechanisms Involved in Urinary Bladder Control: Advances in Neural, Humoral and Local Factors Underlying Function and Disease - Novel Mechanisms Involved in Urinary Bladder Control: Advances in Neural, Humoral and Local

Factors Underlying Function and Disease, Volume II Urinary bladder diseases and micturition dysfunctions affect millions of people worldwide. Aside from physical and functional problems, these conditions cause social and mental discomfort and affect the well-being of the affected patients due to the difficulty of performing several normal activities in daily life. The mechanisms involved in urinary bladder control are not fully understood, and thus available treatments for lower urinary tract disorders are not always effective, representing a challenge in therapeutics and clinics. Also, the etiology of many disturbances affecting the lower urinary tract remains unknown. Despite the fact that classic neural pathways involved in urinary bladder control have been described and accepted up to now, and that different local

bladder mediators have been identified, additional mechanisms involved in urinary bladder control are presumably important.

Risk and Uncertainty Assessment for

Natural Hazards Jonathan Rougier 2013-02-21

Assessment of risk and uncertainty is crucial for natural hazard risk management, facilitating risk communication and informing strategies to successfully mitigate our society's vulnerability to natural disasters. Written by some of the world's leading experts, this book provides a state-of-the-art overview of risk and uncertainty assessment in natural hazards. It presents the core statistical concepts using clearly defined terminology applicable across all types of natural hazards and addresses the full range of sources of uncertainty, the role of expert

judgement and the practice of uncertainty elicitation. The core of the book provides detailed coverage of all the main hazard types and concluding chapters address the wider societal context of risk management. This is an invaluable compendium for academic researchers and professionals working in the fields of natural hazards science, risk assessment and management and environmental science, and will be of interest to anyone involved in natural hazards policy.

Field Guide to Family Business Research

Keith H. Brigham 2023-07-01 The Field Guide to Family Business Research is a concise and accessible guidebook that addresses the unique challenges associated with conducting high-quality family business research. Intended for both new and more experienced scholars, experts provide essential guidelines and insightful 'best practices' for overcoming these challenges.

Characterisation of Soft Magnetic Materials Under Rotational Magnetisation

Stanislaw Zurek 2017-11-22 The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials. The book furthermore focuses on practical aspects of performing such measurements, the associated difficulties as well as solutions to the most common problems. Numerous practical aspects, hands-on experience, and most commonly encountered pitfalls are heavily discussed in the book. The text begins with introduction to

magnetism, then follows with definitions of measurement methods of rotational power loss from physical viewpoint. Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing, making, and using a magnetising apparatus. A synthesis of the likely optimal design of a magnetising apparatus is also given, preceded with the full reasoning based on all the research carried out to date. Characterisation of Soft Magnetic Materials Under Rotational Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation, but also under 1D, 2D or 3D excitation. Because the methods, sensors, and apparatus are extensively discussed it will also be a great reference for more senior researchers and experts in the field. There is a whole chapter devoted to analysis of measurement uncertainty. This subject is rarely published for magnetic measurements, which

makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation. This chapter not only introduces the whole subject, but also provides multiple step-by-step examples which can be easily followed, from very simple cases to much more complex ones. All equations are presented with full SI units which greatly helps in practical application of the presented methodology. Each chapter is written in such a way that it can be studied on its own, so that the reader can focus only on the specific aspects, as required.
