"This book is the outcome of a
National Science Foundation
study entitled: 'Paradigm Shifts
in Engineering Education: The
Influence of Technology,'

SED-9253002. The overall
objective of this study was to
forecast which of the various
possible futures in engineering
education were most promising
to pursue. The first part of the
book contains a series of
critical review papers that
survey the state-of-the-art in
various aspects of engineering
education and attempts to look
at the future to determine
directions for future directions
for engineering education. The
second part of the book
contains data and summaries
from meetings held by focus
groups convened to discuss
possible alternative forecasts."

comprehensive
textbook/reference provides an
in-depth overview of the key

aspects of transportation analysis, with an emphasis on modeling real transportation systems and executing the models. Topics and features: presents comprehensive review questions at the end of each chapter, together with detailed case studies, useful links, references and suggestions for further reading; supplies a variety of teaching support materials at the book's webpage on Springer.com, including a complete set of lecture slides; examines the classification of models used for multimodal transportation systems, and reviews the models and evaluation methods used in transportation planning; explains traffic assignment to road networks, and describes computer simulation integration platforms and their use in the transportation systems sector; provides an overview of transportation simulation tools, and discusses the critical issues in the design, development and use of the simulation models.
