Logical Reasoning Bradley Harris Dowden 1993 This book is designed to engage students' interest and promote their writing abilities while teaching them to think critically and creatively. Dowden takes an activist stance on critical thinking, asking students to create and revise arguments rather than simply recognizing and criticizing them. His book emphasizes inductive reasoning and the analysis of individual claims in the beginning, leaving deductive arguments for consideration later in the course.

A new section on COVID-19 has been added and the impact of this infection is described throughout the book - Clinical Examination overviews - extended and updated to summarise the main elements for each system - Presenting Problems sections - provide a clear pathway for the assessment of and approach to the most common complaints in each specialty - Practice Point summaries - detail the practical skills that medical students and junior doctors must acquire - Emergency boxes - emphasise the core knowledge needed to manage acutely ill patients - In Old Age, In Pregnancy and In Adolescence boxes - highlight differences in the practice of medicine in these patient groups, and illustrate the interfaces between medical, obstetric and paediatric services - The text is extensively illustrated - with over 1000 diagrams, clinical photographs, and radiology and pathology images - The global perspective is enhanced by an International Advisory Board of experts from 11 countries and by leading authors from around the world - The complete, downloadable eBook version is included with your (print copy) purchase - for easy access on your portable device, anytime, anywhere!
