The Geometry of Environment
 Lionel March 2020-10-31

Originally published in 1971

The Geometry of Environment is a fusion of art and mathematics introducing stimulating ideas from modern geometry, using illustrations from architecture and design. The revolution in the teaching of mathematics and the advent of the computer in design challenge traditional ways of appreciating the space about us, and expand the 'structural' understanding of our surroundings through such concepts as transformations, symmetry groups, sets and graphs. This book aims to show the relevance of 'new maths' and encourages exploration of

the widening intellectual horizons of environmental design and architecture. *A Revision of the North American Flies Belonging to the Genus Rhapsiomidas (Diptera, Apioceridae)* Mont A. Cazier 1985 "The present revision covers all known species of flies belonging to the genus Rhapsiomidas from the United States and Mexico. Keys to identify both males and females (when known) are presented as are formal descriptions of nine new species, Rhapsiomidas auratus, forficatus, hasbroucki, hirsuticaudus, nigricaudus, socorroae, spinicaudus, tarsalis, undulatus, two new subspecies, xanthos vittatus, episcopus michelbacheri and 12 previously described species for a total of 23 taxa. Included are seven distributional maps of all the species and subspecies, three figures showing typical habitats, one figure showing labeled structures and 10 figures of abdominal maculation patterns"--Page 183
