Nowadays, online technologies are the core of most fields of engineering and the whole society and are inseparable connected for example with Internet of Things & Industrial Internet of

Things (Industry 4.0), Online & Biomedical Engineering, Data Science, Machine Learning, and Artificial Intelligence, Cross & Mixed Reality, and Remote Working Environments. to name only a few. Since the first REV conference in 2004, we tried to focus on the upcoming use of the Internet for engineering tasks and the opportunities as well as challenges around it. Consequently, the motto of this year's REV2022 was "Artificial Intelligence and Online Engineering". In a globally connected world, the interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In response to that, the general objective of this conference is to contribute and discuss fundamentals, applications, and experiences in the field of Online and Remote Engineering, Virtual

Instrumentation and other related new technologies like Cross Reality, Data Science & Big Data, Internet of Things & Industrial Internet of Things, Industry 4.0, Cyber-Security, and M2M & Smart Objects. Another objective of the conference is to discuss guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning, MOOCs & MOOLs, and Open Resources. REV2022 was the 19th in a series of annual events concerning the area of Online Engineering. It has been organized in cooperation with The British University in Egypt (BUE), Cairo, as a hybrid event from February 28 until March 02, 2022.

**Essential Circuits Reference Guide** John Markus 1988 A guide to research, this volume includes 925 studies of Chaucer written between 1900 and 1984. Each entry is listed once, alphabetically, under an appropriate topic heading or under the title of the work it treats most directly. The annotations provide

bibliographic information, identify the primary focus of the item annotated, and summarize its content. See entry PR1868. These classic circuits were chosen from Markus' Sourcebook of electronic circuits (1968), Electronics circuits manual (1971), and Guidebook of electronics circuits (1974). With circuit integration onto chips, many older circuits have become obsolete. This guide is a distillation of those circuits still in use today for which parts are still available. variety of ways where it can be used in basic linear amplifier applications. The type 555 timer is designed for precision timing applications, monostable multivibrator, astable multivibrator, and Schmitt trigger applications. The XR-2206 i.c. can be used by the technician as a simple waveform generator or as a complex function generator with a variety of modulation facilities. The LM380 i.c. is an easy-to-use general-purpose power audio amplifier. The technician can use it as simple non-inverting 2W amplifier, or in conjunction with a single bipolar transistor, as a small baby alarm. The 723 voltage regulator i.c. can be used in a variety of fixed or variable voltage power supply applications. It can be used as a low voltage (2-7.2V) regulator and, if the technician modifies the circuit, it can produce variable output voltages. The book is suitable for engineers, apprentices, technicians, and students of electrical engineering or electronics.
