### **Contemporary Challenges in Clinical Legal Education**

Matthew Atkinson 2023-08-18

This edited book addresses contemporary challenges in clinical legal education (CLE), considering its role in legal education and in the broader community it serves. Written by experts from various international contexts, the book explores how the changing nature and requirements of legal practice alongside social and technological developments affect the pedagogy of clinical legal education. Chapters chart the development of clinical legal education across various jurisdictions and examine developments in programme design and supervision of and in CLE along with the role of CLE in the community. The authors also reflect on the dynamic and developing role of clinical legal education and offer recommendations for the future. This book will be essential reading for academics, researchers in clinical legal education, and those interested in legal

education across the world. It will also be of interest to students of clinical legal education whose research requires a deeper understanding of the current themes and issues of the subject.

### **Immunology Education**

Andrea Bottaro 2022-01-24 The

explosion of basic and applied

immunology in the first

decades of the 21st century has

brought forth new

opportunities and challenges

for immunology education at

all academic levels, from

professional to undergraduate,

medical, graduate and post-graduate instruction.

Moreover, developing methods

and techniques for educating

general audiences on the

importance and benefits of

immunology will be critical for

increasing public awareness

and support. One major

immediate challenge consists

in accommodating, within the

confines of traditional

immunology curricula, a body

of knowledge that continues to

grow exponentially in both size

and complexity. Furthermore,

the practical toolbox of

immunological research has

vastly expanded, and even in

the present environment of

highly interdisciplinary and

collaborative science, future

immunologists will likely need

to be at least conversant in, for

instance, computational,

structural and system biology,

nanotechnology and tissue

engineering. At the same time,

our perspective of the immune

system has progressively

developed from primarily a

host defense mechanism to a

fundamental homeostatic

system with organism-wide

physiological and clinical significance, and with potentially transformative biotechnological and therapeutic applications. As a consequence, in addition to stand-alone courses, immunology is increasingly integrated into other courses, or distributed longitudinally, throughout a multi-year curriculum. This necessitates inter-disciplinary approaches to reach an expanding range of disciplines, as diverse as neurobiology, cancer biology/ oncology, infectious diseases, pharmacology, orthopedics and bioengineering. Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of “one-size-fits-all” instruction, and to tailor level- and discipline-appropriate content to different types of students using multiple teaching formats. Finally, like most other disciplines, immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are

“digital natives”, comfortable with and expect on-demand and multi-modal learning, diversified sources, and active engagement. Thankfully, the dynamic and interactive behavior of immune system cells, now visualized with striking immediacy by in vivo imaging, has the ability to capture and hold the interest of even the most jaded learner. The need for an increasingly immunology-knowledgeable workforce - not just academic and industry scientists, but also clinical and research lab technicians, biomedical engineers, and physicians in a growing array of specialties - will also expand job opportunities for immunologists as educators, and for content creators dedicated to generating new didactic tools in this field.
