Laboratory Exercises for Preparatory Chemistry
Kathy Dodds Tyner 1994-06 Laboratory Exercises for Preparatory Chemistry is the perfect complement to a one-semester preparatory chemistry laboratory course.

Tyner's manual emphasizes the application of chemistry and the principles of science to everyday life. The labs are directly applicable to the "real world" and often contain supplemental assignments that illustrate an application.

Basic Calculations for Chemical and Biological Analysis Bassey J. S. Efiok 2000 Like the 1993 edition, this iteration does not assume that students, lab technicians and scientists have mastered the prerequisite calculation skills for quantitative problems in the chemical/ biomedical sciences. A new chapter focuses on using spreadsheets and laboratory information management systems. Other chapters cover calculations and techniques relevant to reagents, chemical reactions, properties of gases and solutions, pH and buffer preparation, spectrophotometry, enzyme assays, and radioactivity. Also included are derivations of

some key equations, quick reference guides, and an index to the practical examples. Efiok is with the National Heart, Lung, and Blood Institute, National Institutes of Health. Eduok is in the chemistry department at Xavier U. of Louisiana. c. Book News Inc.
