## Examining a New Automobile Global

### Manufacturing System Amasaka, Kakuro

2022-04-22 Industries have had to quickly and continuously adjust their strategies in recent years to remain relevant and desirable. The automotive industry in particular has grown exponentially since its inception. In order for this industry to evolve with the changing times and appropriately utilize emerging technologies, further study on the new models and practices within the manufacturing process is required.

Examining a New Automobile Global Manufacturing System considers emerging automobile manufacturing practices for the strengthening of automobile corporate management in advanced companies and discusses key changes within corporate management strategies and management technology for the automotive industry. Covering a range of critical topics such as production systems, teaching strategies, and design models, this reference work is ideal for manufacturers,

managers, researchers, scholars, practitioners, academicians, instructors, and students. New JIT, New Management Technology Principle Kakuro Amasaka 2014-12-03 New JIT, New Management Technology Principle contains the previously published, updated, and new works of renowned scientist, scholar, and consultant Kakuro Amasaka. This book details the Just-in-Time (JIT) quality management strategy, exploring the cutting edge of a new management technology principle that surpasses what traditional JIT has accomplished. The new JIT principle contains hardware and software systems, and next-generation technical principles for transforming management technology into management strategy. This comprehensive work covers traditional JIT, innovation and evolution, the full new JIT and its applications, along with case studies. It is clearly impossible to lead the next generation by merely maintaining the two Toyota management technology principles, Toyota Production System

and Total Quality Management. To overcome this issue, it is essential to renovate not only TPS, which is the core principle of the production process, but also establish core principles for marketing, design and development, production, and other departments. This book reassesses the way management technology was carried out in the manufacturing industry and establishes new JIT. This next-generation management technology model is the JIT system for not only manufacturing, but also for customer relations, sales and marketing, product planning, research and development (R&D), product design, production engineering, logistics, procurement, and administration and management for enhancing business process innovation and introduction of new concepts and procedures. The book focuses on the theory and application of strategic management technology through the application of new JIT, then demonstrates its effectiveness in a case study based on an

advanced car manufacturer. Using this new model, you can realize manufacturing that places top priority on customers with a good Quality, Cost, and Delivery (QCD) in a rapidly changing technical environment, and allows you to create uniform quality for the global market.
