the required advanced science and mathematics examinations taken by university-bound students in seven countries. This research focuses on topics covered, types of questions used, and performance expected from students. The book concentrates on comparisons of the examinations, illustrating their similarities and differences with selected questions taken from the actual examinations. The international comparisons presented offer a window on educational 'laboratories' in seven countries.

Beyond the Numbers Edwin P. Christmann 2011 Statistics is required coursework within most teacher certification programs. Beyond the Numbers presents a nonthreatening, practical approach to statistics, providing step-by-step instructions for understanding and implementing the essential components of the subject. The

basic and understandable explanations in Beyond the Numbers break down complex statistical processes to simple arithmetic computations that can be applied with the confidence that accompanies understanding. Mathematics Education Jacqueline Dewar 2016-11-26 Many in the mathematics community in the U.S. are involved in mathematics education in various capacities. This book highlights the breadth of the work in K-16 mathematics education done by members of US departments of mathematical sciences. It contains contributions by mathematicians and mathematics educators who do work in areas such as teacher education, quantitative literacy, informal education, writing and communication, social justice, outreach and mentoring, tactile learning, art and mathematics, ethnomathematics, scholarship of teaching and learning, and mathematics education research. Contributors describe their work, its impact, and how it is perceived and valued. In addition, there

is a chapter, co-authored by two mathematicians who have become administrators, on the challenges of supporting, evaluating, and rewarding work in mathematics education in departments of mathematical sciences. This book is intended to inform the readership of the breadth of the work and to encourage discussion of its value in the mathematical community. The writing is expository, not technical, and should be accessible and informative to a diverse audience. The primary readership includes all those in departments of mathematical sciences in two or four year colleges and universities, and their administrators, as well as graduate students. Researchers in education may also find topics of interest. Other potential readers include those doing work in mathematics education in schools of education, and teachers of secondary or middle school mathematics as well as those involved in their professional development.

Wildlife Conservation on Farmland Volume 2

David W. Macdonald 2015-07-30 Many of the encounters between farming and wildlife, especially vertebrates, involve some level of conflict which can cause disadvantage to both the wildlife and the people involved. Through a series of WildCRU case-studies, this volume investigates the sources of the problems, and ultimately of the threats to conservation, discussing a variety of remedies and mitigations, and demonstrating the benefits of evidence-based, inter-disciplinary policy.

Beyond the body? The Future of Embodied Cognition Guy Dove 2016-03-22 Embodied

cognition represents one of most important research programs in contemporary cognitive

science. Although there is a diversity of opinion concerning the nature of embodiment, the core

idea is that cognitive processes are influenced by body morphology, emotions, and

sensorimotor systems. This idea is supported by an ever increasing collection of empirical studies

that fall into two broad classes: one consisting of experiments that implicate action, emotion, and

perception systems in seemingly abstract cognitive tasks and the other consisting of

experiments that demonstrate the contribution of bodily interaction with the external

environment to the performance of such tasks. Now that the research program of embodied cognition is well established, the time seems right for assessing its further promise and potential limitations. This research topic aims to create an interdisciplinary forum for discussing where we go from here. Given that we have good reason to think that the body influences cognition in surprisingly robust ways, the central question is no longer whether or not any cognitive processes are embodied. Instead, other questions have come to the fore: To what extent are cognitive processes in general embodied? Are there disembodied processes? Among those that are embodied, how are they embodied? Is there more than one kind of embodiment? Is embodiment a matter of degree? There are a number of specific issues that could be addressed by submissions to this research topic. Some supporters of embodied cognition eschew representations. Should anti-representationalism be a core part of an embodied approach? What

role should dynamical models play? Research in embodied cognition has tended to focus on the importance of sensorimotor areas for cognition. What are the functions of multimodal or amodal brain areas? Abstract concepts have proved to be a challenge for embodied cognition. How should they be handled? Should researchers allow for some form of weak embodiment? Currently, there is a split between those who offer a simulation-based approach to embodiment and those who offer an enactive approach. Who is right? Should there be a rapprochement between these two groups? Some experimental and robotics researchers have recently shown a great deal of interest in the idea that external resources such as language can serve as form of cognitive scaffolding. What are the implications of this idea for embodied cognition? This research aims to bring together empirical and theoretical work from a diversity of perspectives. Subtitling is one of the most important disciplines in the history

of social sciences, with the help of cognitive psychology. Researchers are encouraged to submit papers to discussing the future of embodied cognition, methods, models, or theories.
