Bottleneckers William Mellor 2016-12-13

Bottleneck (n): a person who advocates for the creation or perpetuation of government regulation, particularly an occupational license, to restrict entry into his or her occupation, thereby accruing an economic advantage without providing a benefit to consumers. The Left, Right, and Center all hate them: powerful special interests that use government power for their own private benefit. In an era when the Left hates “fat cats” and the Right despises “crony capitalists,” now there is an artful and memorable one-word pejorative they can both get behind: bottleneckers. A “bottleneck” is anyone who uses government power to limit competition and thereby reap monopoly profits and other benefits. Bottleneckers work with

politicians to constrict competition, entrepreneurial innovation, and opportunity. They thereby limit consumer choice; drive up consumer prices; and they support politicians who willingly overstep the constitutional limits of their powers to create, maintain, and expand these anticompetitive bottlenecks. The Institute for Justice’s new book *Bottleneckers* coins a new word in the American lexicon, and provides a rich history and well-researched examples of bottleneckers in one occupation after another—from alcohol distributors to taxicab cartels—pointing the way to positive reforms. **Student Handbook for Pharmacy Practice Research** Rajender R. It is more concise and easier to read than some, yet it covers the breadth of emergency medicine practice more comprehensively than others....Just as previous editions did, the seventh presents all of the most pertinent and up-to-date information in a well-organized format that is comprehensive yet easy to read. Mineral Property Evaluation Richard L. Bullock 2017-12-01 “Everything” sums up what must be considered for a properly documented property evaluation. Less than 30% of the projects that are developed in the minerals industry yield the return on investment that was projected from the project feasibility studies. The tools described in this handbook will greatly improve the probability of meeting your projections and minimizing project execution capital cost blowout that has become so prevalent in this industry in recent years. Mineral Property Evaluation provides guidelines to follow in performing mineral property feasibility and evaluation studies and due diligence, and in preparing proper documents for bankable presentations. It highlights the need for a consistent, systematic methodology in performing evaluation and feasibility work. The objective of a feasibility and evaluation study should be to assess the value of the undeveloped or developed mineral property and to convey

these findings to the company that is considering applying technical and physical changes to bring the property into production of a mineral product. The analysis needs to determine the net present worth returned to the company for investing in these changes and to reach that decision point as early as possible and with the least amount of money spent on the evaluation study. All resources are not reserves, nor are all minerals an ore. The successful conclusion of any property evaluation depends on the development, work, and conclusions of the project team. The handbook has a diverse audience:

- Professionals in the minerals industry that perform mineral property evaluations.
- Companies that have mineral properties and perform mineral property feasibility studies and evaluations or are buying properties based on property evaluation.
- Financial institutions, both domestic and overseas, that finance or raise capital for the minerals industry.
- Consulting firms and

architectural and engineering contractors that utilize mineral property feasibility studies and need standards to follow. • And probably the most important, the mining and geological engineering students and geology and economic geology students that need to learn the standards that they should follow throughout their careers.
