Evaluation of Emission Control Strategies for the 8-hour Ozone Standard in the Houston and Dallas Areas and a Pilot-scale Study of In-use Emissions from Heavy-duty Diesel Dump Trucks Using a Portable Emissions Monitoring System (PEMS) 2006 This project had two primary objectives. The first objective was to examine the relative effectiveness of potential new emission control measures, primarily from mobile sources, on 1-hour and 8-hour ozone concentrations and population exposure metrics in the Houston and Dallas areas. The second objective was to conduct a pilot-scale study to examine how portable emissions monitoring system (PEMS) technology can be used to characterize exhaust emissions from heavy-duty diesel vehicles and equipment during real-world driving conditions. The overall goal of the research was to provide a foundation for effective transportation and air quality policy decisions in eastern Texas. A total of 38 modeling simulations were conducted to examine a range of emission control strategies.
