Current Perspectives and New Directions in Mechanics, Modelling and Design of Structural Systems Alphose Zingoni 2022-09-05

Current Perspectives and New Directions in Mechanics, Modelling and Design of Structural Systems comprises 330 papers that were presented at the Eighth International Conference on Structural Engineering, Mechanics and Computation (SEMC 2022, Cape Town, South Africa, 5-7 September 2022). The topics featured may be clustered into six broad categories that span the themes of mechanics, modelling and engineering design: (i) mechanics of materials (elasticity, plasticity, porous media, fracture, fatigue, damage, delamination, viscosity, creep, shrinkage, etc); (ii) mechanics of structures (dynamics, vibration, seismic response, soil-structure interaction, fluid-structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse behaviour); (iii) numerical modelling and experimental testing (numerical methods, simulation techniques, multi-scale modelling, computational modelling, laboratory testing, field testing, experimental measurements); (iv) design in traditional engineering materials (steel, concrete, steel-concrete composite, aluminium, masonry, timber); (v) innovative concepts, sustainable engineering and special structures

(nanostructures, adaptive structures, smart structures, composite structures, glass structures, bio-inspired structures, shells, membranes, space structures, lightweight structures, etc); (vi) the engineering process and life-cycle considerations (conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning). Two versions of the papers are available: full papers of length 6 pages are included in an e-book, while short papers of length 2 pages, intended to be concise but self-contained summaries of the full papers, are in this printed book. This work will be of interest to civil, structural, mechanical, marine and aerospace engineers, as well as planners and architects.

Commercial Aircraft Projects Hans-Henrich Altfeld 2010 The theme of this book is that any management approach for the development of commercial aircraft should seek to integrate the strengths of state-of-the-art management disciplines while limiting their application to some basic essentials. It explores the interconnectedness between individual management disciplines by explicitly considering the matter of integrative management.

Interlocking and 3D Paper Airplanes Teong Hin Tan 2005-02-09 This book contains instructions and diagrams for you to fold sixteen interlocking and 3D paper airplanes. Eight of these airplanes have enclosed three-dimensional fuselage, with a hollow cavity, similar to real airplanes. These paper airplane designs and their folding concepts are all

originals. They are probably amongst the most elegant and sophisticated paper airplanes you have ever seen. Each of these Interlocking and 3D paper airplanes is made from an ordinary sheet of 8.5 x 11 paper, without any cutting or gluing. Using the breakthrough interlocking fold, wing fold and fuselage fold, you will be amazed at how an ordinary sheet of paper can be transformed into a tightly bound paper airplane with beautiful, and seemingly impossible, three-dimensional fuselage. These airplanes are also great gliders because of their streamlined shapes. It is very likely that you will find great joy in folding and flying these very special and unique interlocking and 3D paper airplanes.

Aircraft Propulsion Saeed Farokhi 2025-06-16 Updated edition of the successful textbook exploring cutting-edge developments in the field and Net-Zero aviation goals of 2050 Maintaining the successful foundation of previous editions, the fourth edition of *Aircraft Propulsion* is a forward-looking textbook on propulsion, from the basic principles to more advanced treatments in engine components and system integration, that focuses on the Net-Zero Aviation goals of 2050. This book explores the alphabet of the emerging technology in propulsion by emphasizing electrification and sustainable aviation fuels (SAF), including liquefied natural gas (LNG) and hydrogen. This book also covers advanced topics like flow control, adaptive cycle engines (ACE), hybrid-electric propulsion, pulse detonation engines (PDE), propulsion integration, and engine performance testing and instrumentation. Along with content updates, this new edition devotes a new chapter to supersonic and hypersonic propulsion. End-of-chapter problem sets are included as a learning aid with solutions available on a companion website. A quiz appendix with 45 10-minute quizzes helps readers test their knowledge at every stage of learning. *Aircraft Propulsion* includes information on: Engine thrust and performance parameters, gas turbine engine cycle analysis, and aircraft engine inlets and nozzles Combustion chambers and afterburners, axial-flow compressor and fan aerodynamics, centrifugal compressor aerodynamics and gas turbine aerodynamics, and

heat transfer and cooling technologies Aircraft engine component matching and off-design analysis Available on a companion website: Compressible flow with friction and heat, general aviation and uninhabited aerial vehicle propulsion systems, propeller theory, and chemical rocket propulsion Aircraft Propulsion is an essential reference on the subject for aerospace and mechanical engineering students in their upper undergraduate or first-year graduate studies, practicing engineers in industry and research centers working on sustainability, and aviation industry engineers.
