Fogliatto 2010-11-09 Mass

customization (MC) has been hailed as a successful operations strategy across manufacturing and service industries for the past three decades. However, the wider implications of using MC approaches in the broader industrial and economic environment are not yet clearly understood. Mass

Customization: Engineering and Managing Global

Operations presents emerging

research on the role of MC and

personalization in today's

international operations

context. The chapters cover

MC in the context of global

industrial economics and

operations. Moreover, the book

discusses MC topics that are

relevant to the manufacturing

and service sectors, such as: •

product platforms; • learning

curve modeling; • additive

manufacturing; and • service

customization. Case studies in

manufacturing (e.g., apparel

and transportation) and

services (e.g., banking and virtual worlds) are also included. Mass Customization: Engineering and Managing Global Operations is a valuable text for mass customization researchers and practitioners. Researchers will find a selection of chapters prepared by internationally renowned authors, comprising most of their recent research in MC. Engineering professionals will be drawn by the vivid discussion of operational aspects and methods of MC, as well as by the selection of cases illustrating their practical application.

The Pan-Industrial

Revolution Richard D'Aveni 2018-10-16 The acclaimed author of Strategic Capitalism presents a provocative new vision of global industry in the age of 3-D printing: "essential business reading" (Kirkus, starred review). With books like Hypercompetition and Strategic Capitalism, Richard D'Aveni has established himself as a business strategist of uncanny prescience. In The Pan-Industrial Revolution, he demonstrates how the advent of industrial-scale 3-D printing is already happening under the radar, and that it will have a far-reaching impact that most corporate and governmental leaders have yet to anticipate or understand. 3-D printing, now called additive manufacturing, has moved far beyond a desktop technology used by hobbyists to churn out trinkets and toys. In this eye-opening account, D'Aveni reveals how recent breakthroughs have been

secretly adapted by Fortune 500 companies to revolutionize the manufacture jet engines, airplanes, automobiles, and so much more. D'Aveni explains how this technology will transform the landscape of manufacturing, and the dramatic effect this change will have on the world economy. A handful of massively powerful corporations—what D'Aveni calls pan-industrials—will become as important as any tech giant in re-structuring the global order.

Post-Processing of Parts and Components Fabricated by Fused Deposition Modeling

Vinayak R. Malik 2024-11-15 This book describes several post-processing techniques that can be used to enhance the mechanical strength, isotropy, surface quality, and dimensional accuracy of 3D printed components using the Fused Deposition Modeling (FDM) technique. It also discusses the usage of adhesives, interlocks, fasteners, ultrasonic, frictional, and microwave energy to join FDM-3D printed parts.

Furthermore, the book also covers the scope of future research and challenges in the post-processing of FDM parts, as well as some of the most popular approaches in the field, such as Big Area Additive Manufacturing (BAAM), Machine Learning, and Internet of Things (IoT).

Features:

- Covers all necessary details related to post-processing of Fused Deposition Modeling (FDM) parts.
- Provides an overview of various joining techniques for 3D printed FDM parts.
- Focuses on the latest developments related to sustainability and optimization in post-processing of FDM parts.
- Includes microwave joining of 3D printed parts.
- Reviews case studies on cutting edge research, innovation, and development aspects. This book is aimed at researchers and graduate students in additive manufacturing, materials science, as well as manufacturing engineering.
