Abaqus for Catia V5 Tutorials Nader G. Zamani 2006 ABAQUS for CATIA (AFC), the software tool, uses the powerful pre- and post-processing capability of CATIA V5 to set up problems for solution using the versatile FEA solver, ABAQUS. Currently, AFC is Capable of solving problems involving linear and non linear static as well as thermal analyses. This tutorial book uses a step-by-step approach to uncover the different capabilities of AFC for the user. The chapters cover a Wide variety of Topics and are arranged in a way such that the user of this text can start with simpler linear analyses and slowly get into more complex problems such as those involving non-linear analyses, multi-step analyses, temperature dependent behavior, composite materials, contact problems, hybrid elements, etc. The authors expect the user of this book to have some prior knowledge of CATIA and after going through these tutorials someone who starts as a first-time user of AFC can become an expert user of all the features of this tool.

Limit State of Materials and Structures Géry de Saxcé 2012-10-18 To determine the carrying capacity of a structure or a structural element susceptible to operate beyond the elastic limit is an important task in many situations of both mechanical and civil engineering. The so-called “direct methods” play an increasing role due to the fact that they allow rapid access to the request information in mathematically constructive manners. They embrace Limit Analysis, the most developed approach now widely used, and Shakedown Analysis, a powerful extension to the variable repeated loads potentially more economical than step-by-step inelastic analysis. This book is the outcome of a workshop held at the University of Sciences and Technology of Lille. The individual contributions stem from the areas of new numerical developments rendering this methods more attractive for industrial design, extension of the general methodology to new horizons, probabilistic approaches and concrete technological applications.
