Libraries Supporting Online Learning Christina D. Mune 2020-10-07 Using practical examples from librarians in the field, this book lays out current issues in online learning and teaches librarians how to adapt a variety of library services—including instruction, reference, and collection development—to online education. Recent studies highlighting the challenges faced by online learners show that skills librarians are uniquely qualified to teach, such as information and digital literacy and source evaluation, can improve academic performance in online courses and enhance the online learning experience. Just as embedded librarianship was developed to answer the needs of online courses when they emerged in the early 2000s, online learning librarian Christina Mune now teaches "online librarianship" as a set of realistic strategies for serving a variety of online education models. Each chapter of *Libraries Supporting Online Learning* addresses a different strategy for supporting online students and/or faculty, with all strategies derived from real-world practices. Librarians will find information on best practices for creating digital literacy tutorials and dynamic content, providing patrons with open access and open educational resources, helping patrons to avoid copyright issues, promoting peer-to-peer

learning and resource sharing, posting to social media, and developing scalable reference services. The tools and practical examples in this book will be useful for all educators interested in increasing the efficacy of online learning.

Re-Engineering Humanity Brett Frischmann 2019-09-12 Every day, new warnings emerge about artificial intelligence rebelling against us. All the while, a more immediate dilemma flies under the radar. Have forces been unleashed that are thrusting humanity down an ill-advised path, one that's increasingly making us behave like simple machines? In this wide-reaching, interdisciplinary book, Brett Frischmann and Evan Selinger examine what's happening to our lives as society embraces big data, predictive analytics, and smart environments. They explain how the goal of designing programmable worlds goes hand in hand with engineering predictable and programmable people. Detailing new frameworks, provocative case studies, and mind-blowing thought experiments, Frischmann and Selinger reveal hidden connections between fitness trackers, electronic contracts, social media platforms, robotic companions, fake news, autonomous cars, and more. This powerful analysis should be read by anyone interested in understanding exactly how technology threatens the future of our society, and what we can do now to build something better.
