Teaching Literature with Artificial Intelligence Eric D. Abrams
2025-09-15 Teaching Literature with Artificial Intelligence explores the
use of chatbots as participants in the teaching and learning of literature
in high school and college classrooms while highlighting potentially

outmoded norms and expectations of ELA instruction. Artificial
intelligence programs have profoundly altered the daily realities of
teachers and students, inspiring concern and opportunity alike. Thought-
provoking, theoretically grounded, and full of replicable
autoethnographic experiments, this book offers real-world examples of
generative chatbot technologies in ELA classrooms, positioning their
accessibility and ubiquity as an incentive for critiquing and enriching
traditional teaching and learning approaches. Graduate students,
teaching faculty, and scholars of teacher education, English and
literature education, digital literacies, and learning design will come
away with a sharp critique of the purported affordances of chatbots as
well as an incisive demonstration of AI as a classroom tool that supports,
rather than diminishes, the meaningful learning, critical thinking, and
agentive development of young people today.

issue called the Instruments index, published sometimes as pt. 2 of a
