**Cracking the Codes** Barry D. Yatt 1998-07-27 Unleash the design potential in codes Building codes and standards are often seen as obstacles to design excellence. Not any more! With the help of this down-to-earth guide, architecture professionals and students can stop dreading these rules and start using them to their advantage. Cracking the Codes makes codes and standards accessible by promoting a sound understanding of regulatory issues --without getting caught up in the minutiae. The book works the way projects do, moving through each stage of the planning process to identify and consolidate the basic regulatory requirements that must be addressed at every step along the way. It equips readers not only to recognize issues that call for regulatory research and to work effectively with appropriate consultants, but also to suggest strategic directions that are compatible with regulatory requirements and to make informed decisions in response to consultants' advice. In addition to the model building codes, including the forthcoming International Building Code, this book covers zoning ordinances and covenants, as well as rules related to accessibility, historic preservation, environmental quality, consumer protection, and a host of other critical issues. Information is extensively cross-referenced to make topics simple to find, and the uniform methodology applied to each regulatory issue makes the book both easy to follow and design-friendly. No project team should ever be held hostage by lack of familiarity with codes and standards. Cracking the Codes gives architects the freedom they need to break the rules without breaking the regulations.

**Man-Machine-Environment System Engineering** Shengzhao Long 2020-09-28 This book presents selected papers introducing readers to the key research topics and latest development trends in the theory and application of MMESE. The advanced integrated research topic man-machine-environment system engineering (MMESE) was first established in China by Professor Shengzhao Long in 1981, with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd, 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China!" MMESE primarily focuses on the relationship between man, machine and environment, studying the optimum combination of man-machine-environment systems, where "man" refers to people in the workplace (e.g., operators, decision-makers), "machine" is the general name for any object controlled by man (including tools, machinery, computers, systems and technologies), and "environment" describes the specific working conditions under which man and machine interact (e.g., temperature, noise, vibration and hazardous gases). The three goals of optimizing such systems are ensuring safety, efficiency and economy. Presenting interdisciplinary studies on the concepts and methods in physiology, psychology, system engineering, computer science, environmental science, management, education and other related disciplines, this book is a valuable resource for all researchers and professionals whose work involves MMESE subjects.
