The Effective Teaching of Language Arts Donna E. Norton 1993
Field-tested and backed by sound research, this popular methods book provides readers with a broad background in language arts, including assessment and instruction in the major areas of speaking, listening, writing, and reading. Thoroughly encompassing the 'back-to-basics' movement and the trend toward literature-based instruction, it offers clearly developed methodologies and lessons, and makes extensive use of children's actual language samples to illustrate ways literature can enhance the development of language arts skills. Written by an award-winning author, the book focuses on material that embraces the needs of all learners: linguistically-different children, multicultural children, and children with learning disabilities and handicaps. Emphasizing the importance of literature-based strategies and the identification of literature that can be applied to each of the language arts, it offers 'For Your Plan Book', a special section at the end of most chapters which provides concrete ideas, field-tested lessons and unit plans teachers can take right into their classroom. Literature chapters are now moved to the forefront of the book, enabling instructors to place a greater emphasis on literature-related language arts. Strong methodologies in the composition chapters now encompass the writing process, plus results of a five-year composition study of the relationships between writing and literature. Public school educators, parents in home schooling, and library personnel.

Two Roads Diverged and I Took Both Melanie Mayer 2010-06-22
Two Roads Diverged and I Took Both: Meaningful Writing Instruction in an Age of Testing presents theories, research, and practical ideas for classroom writing instruction, specifically in the areas of: the reading-writing connection, the social aspect of writing, grammar instruction, teaching mainstreamed special education or English Language Learners, and assessment. The book's premise is that when research-based best practices are applied, student writing quality is improved and authentic learning takes place, which will also promote success on state-mandated writing assessments; but preparing students to write primarily for assessments does not promote excellent writing for life.

An Invitation to Computational Homotopy Graham Ellis 2019
An Invitation to Computational Homotopy is an introduction to elementary algebraic topology for those with an interest in computers and computer programming. It expertly illustrates how the basics of the subject can be implemented on a computer through its focus on fully-worked examples designed to develop problem solving techniques. The transition from basic theory to practical computation raises a range of non-trivial algorithmic issues which will appeal to readers already familiar with basic theory and who are interested in developing computational aspects. The book covers a subset of standard introductory material on fundamental groups, covering spaces, homology, cohomology and classifying spaces as well as some less standard material on crossed modules. These topics are covered in a way that hints at potential applications of topology in areas of computer science and engineering outside the usual territory of pure mathematics, and also in a way that demonstrates how computers can be used to perform explicit calculations within the domain of pure algebraic topology itself. The initial chapters include in-depth examples from data mining, biology and digital image analysis, while the later chapters cover a range of computational examples on the cohomology of classifying spaces that are likely beyond the reach of a purely paper-and-pen approach to the subject. An Invitation to Computational Homotopy serves as a self-contained and informal introduction to these topics and their implementation in the sphere of computer science. Written in a dynamic and engaging style, it skilfully showcases a range of useful machine computations, and will serve as an invaluable aid to graduate students working with algebraic topology.

Integrating Library Use Skills Into the General Education Curriculum

Linda S Katz 2021-04-14
This provocative new book will help you design and implement the most effective library user education possible--one that builds on basic library use skills through a progressively sophisticated program that is fully integrated into course curriculum at all levels, from the freshman year to graduation and beyond. By exploring major issues underlying the integration of library use skills and research methodologies into the general education curriculum, contributors raise important questions, offer creative ideas, and provide insight into the many improvements made in library instruction in the past few years. Following an introduction by Patricia Breivik, a recognized national authority on libraries and general education, contributors representing two- and four-year institutions and research universities discuss such issues as the relationship between high school and college programs, research skills instruction in a remote access environment, the use of microcomputers and end user searching programs to promote critical thinking, and the improved relationship between librarians and faculty. In addition to articles on library instruction geared towards question analysis, information generation by field, structure of published knowledge and dissemination of a discipline's literature, chapters identify cooperative efforts needed among school, public, special, academic libraries and other information agencies, computer center personnel, and online database vendors. Bibliographic instruction librarians who are active participants in planning and administering library user education programs will find this volume to be essential for building and developing stronger, more integrated programs.
