Concepts of Genetics William S. Klug 1986 This book is known for its clear writing style, emphasis on concepts, visual art program and thoughtful coverage of all areas of genetics. The authors capture readers' interest with up-to-date coverage of cutting-edge topics and research. The authors emphasize those concepts that readers should come to understand and take away with them, not a myriad of details and exceptions that need to be memorized and are soon forgotten. In addition to topics traditionally covered in genetics, this book has increased coverage of genomics, including proteomics and bioinformatics, biotechnology, and contains

more real-world problems. For anyone in biology, agriculture or health science who is interested in genetics.

Parasitoid Population Biology Michael E. Hochberg 2000-08-27 Extraordinary in the diversity of their lifestyles, insect parasitoids have become extremely important study organisms in the field of population biology, and they are the most frequently used agents in the biological control of insect pests. This book presents the ideas of seventeen international specialists, providing the reader not only with an overview but also with lively discussions of the most salient questions pertaining to the field today and prescriptions for avenues of future research. After a general introduction, the book divides into three main sections: population dynamics, population diversity, and population applications. The first section covers gaps in our knowledge in parasitoid behavior, parasitoid persistence, and how space and landscape affect dynamics. The contributions on population diversity consider how evolution has molded parasitoid populations and communities. The

final section calls for novel approaches toward resolving the enigma of success in biological control and questions why parasitoids have been largely neglected in conservation biology.

Parasitoid Population Biology will likely be an important influence on research well into the twenty-first century and will provoke discussion amongst parasitoid biologists and population biologists. In addition to the editors, the contributors are Carlos Bernstein, Jacques Brodeur, Jerome Casas, H.C.J. Godfray, Susan Harrison, Alan Hastings, Bradford A. Hawkins, George E. Heimpel, Marcel Holyoak, Nick Mills, Bernard D. Roitberg, Jens Roland, Michael R. Strand, Teja Tscharntke, and Minus van Baalen. *11th Hour* David L. Scientific American Biology for a Changing World Michele Shuster 2011-02-25 To view sample chapters and more information visit www.whfreeman.com/SABiologyPreview All of us involved in science education understand the

importance of scientific literacy. How do we get the attention of a nonscientist? And if we can get it, how do we keep it - not only for the duration of the course or the chapter in a textbook but beyond? How do we convey in our courses and our textbooks not just what we know but also how science is done? These are the challenges we hope to address with our new series of textbooks specifically for the nonscientist. With this series, W. H. Freeman and Scientific American join forces not just to engage nonscientists but to equip them critical life tools.
