Encyclopedia of Architectural Technology Jacqueline Glass 2002-04-03 Constant technological advancements are opening up dramatic new possibilities for the built form; at the same time architects are developing innovative designs which require new techniques to make these ideas reality. The Encyclopedia of Architectural Technology is the first book to specifically address these two issues by providing a comprehensive reference to modern architectural technologies, encompassing all key aspects of construction, structures, environmental design and servicing. The Encyclopaedia features over 180 entries ranging from materials and techniques to notable innovators in architecture and engineering. Each entry includes a brief quick-reference summary followed by a more detailed text and suggestions for further reading. Besides technological terms, entries are included on related topics such as sick building syndrome and sustainability. Key engineers Ove Arup and Ted Happold have dedicated entries, as do a range of ground-breaking architects such as Le Corbusier, Norman Foster, Walter Gropius, Herzog & de Meuron, Oscar Niemeyer, Richard Rogers, Carlo Scarpa, Frank Lloyd Wright, Ken Yeang and many others.

A Handbook of Sustainable Building Design and Engineering Dejan Mumovic 2013-06-17 The combined challenges of health, comfort, climate change and energy security cross the boundaries of traditional building disciplines. This authoritative collection, focusing mostly on energy and ventilation, provides the current and next generation of building engineering professionals with what they need to work closely with many disciplines to meet these challenges. A Handbook of Sustainable Building Engineering covers: how to design, engineer and monitor a building in a manner that minimises the emissions of greenhouse gases; how to adapt the environment, fabric and services of existing and new buildings to climate change; how to improve the environment in and around buildings to provide better health, comfort, security and productivity; and provides crucial expertise on monitoring the performance of buildings once they are occupied. The authors explain the principles behind built environment engineering, and offer practical guidance through international case studies.

Designing Spaces for Natural Ventilation Ulrike Passe 2015-03-12 Buildings can breathe naturally, without the use of mechanical systems, if you design the spaces properly. This accessible and thorough guide shows you how in more than 260 color diagrams and photographs illustrating case studies and CFD simulations. You can achieve truly natural ventilation, by considering the building's structure, envelope, energy use, and form, as well as giving the occupants thermal comfort and healthy indoor air. By using scientific and architectural visualization tools included here, you can develop ventilation strategies without an engineering background. Handy sections that summarize the science, explain rules of thumb, and detail the latest research in thermal and

fluid dynamics will keep your designs sustainable, energy efficient, and up-to-date.

A Guide to Energy Management in Buildings Douglas Harris 2012-06-25 Inefficient energy use in buildings is both increasingly expensive and unsustainable. Indeed, the reduction of the energy consumption of existing buildings is as least as important as the design of new low-energy buildings. Controlling energy use is one thing, but it is important to assess or estimate it, and to understand the range of interventions for reducing its use and the methods for assessing the cost effectiveness of these measures. This comprehensive guide clearly and concisely covers the various issues from a theoretical standpoint and provides practical, worked examples where appropriate, along with examples of how the calculations are carried out. Topics covered include: where and how energy is used in buildings energy audits measuring and monitoring energy use techniques for reducing energy use in buildings legislative issues. It provides a template for instigating the energy management process within an organization, as well as guidance on management issues such as employee motivation, and gives practical details on how to carry it through. This book should appeal to building managers and facilities managers and also to students of energy management modules in FE and HE courses.
