Giving Students a Say Myron Dueck

2021-01-26 Assessment is an essential part of teaching and learning, but too often it leads to misleading conclusions—sometimes with dire consequences for students. How can educators improve assessment practices so that the results are accurate, meaningful, informative, and fair? Educator and best-selling author Myron Dueck draws from his firsthand experience and his work with districts around the world to provide a simple but profound answer: put student voice and choice at the center of the process. In this engaging and well-researched book, Dueck reveals troubling issues related to traditional

approaches and offers numerous examples of educators at all levels who are transforming assessment by using tools and methods that engage and empower students. He also shares surprising revelations about the nature of memory and learning that speak to the need for rethinking how we measure student understanding and achievement. Readers will find sound advice and detailed guidance on how to

- * Share and cocreate precise learning targets,
- * Develop student-friendly rubrics linked to standards,
- * Involve students in ongoing assessment procedures,
- * Replace flawed grading systems with ones that better reflect what students know and can do, and
- * Design structures for students' self-reporting on their progress in learning.

Inspired by the origins of the word assessment—derived from the Latin for

"to sit beside"—Dueck urges educators to discard old habits and instead work with students as partners in assessment. For those who do, the effort is rewarding and the benefits are significant

Wilfrid Sellars James O'Shea 2015-02-13 The work of the American philosopher Wilfrid Sellars continues to have a significant impact on the contemporary philosophical scene. His writings have influenced major thinkers such as Rorty, McDowell, Brandom, and Dennett, and many of Sellars' basic conceptions, such as the logical space of reasons, the myth of the given, and the manifest and scientific images, have become standard philosophical terms. Often, however, recent uses of these terms do not reflect the richness or the true sense of Sellars' original ideas. This book gets to the heart of Sellars' philosophy and provides students with a comprehensive critical introduction to his life's

work. The book is structured around what Sellars himself regarded as the philosopher's overarching task: to achieve a coherent vision of reality that will finally overcome the continuing clashes between the world as common sense takes it to be and the world as science reveals it to be. It provides a clear analysis of Sellars' groundbreaking philosophy of mind, his novel theory of consciousness, his defense of scientific realism, and his thoroughgoing naturalism with a normative turn. Providing a lively examination of Sellars' work through the central problem of what it means to be a human being in a scientific world, this book will be a valuable resource for all students of philosophy.
