Design & Make It! Dave Mawson 2001 This volume was written by a team to classroom teachers and examiners to support pupils as they work through their GCSE course in design and technology. It is intended to guide them through the important stages of their coursework and to prepare for the final examination paper. It contains a mixture of extended projects, focused tasks and activities which together with the key points and sample examination questions support the AQA syllabus. The Channel 4 television programme associated with this series provides an introduction to the whole course and there is a range of specific opportunities to view and integrate the content throughout the extended projects.

Digital Electronics Through Experimentation Robert Delp 1984-03

Make: FPGAs David Romano

2016-02-29 What if you could use software to design hardware? Not just any hardware--imagine specifying the behavior of a complex parallel computer, sending it to a chip, and having it run on that chip--all without any manufacturing? With Field-Programmable Gate Arrays (FPGAs), you can design such a machine with your mouse and keyboard. When you deploy it to the FPGA, it immediately takes on the behavior that you defined. Want to create something that behaves like a display driver integrated circuit? How about a CPU with an instruction set you dreamed up? Or your very own Bitcoin miner You can do all this with FPGAs. Because you're not writing programs--rather, you're designing a chip whose sole purpose is to do what you tell it--it's faster than anything you can do in code. With Make: FPGAs, you'll learn how to break down problems into something that can be solved on an FPGA, design the logic that will run on your FPGA, and hook up electronic components

to create finished projects.
