Conducting Research Lawrence T. Orcher 2016-10-14 • Prepares students to conduct their first empirical research study, with quantitative and qualitative methods covered in detail. Common features as well as differences between the two research approaches are explored. • While theoretical material is included, the emphasis is on providing practical, easy-to-follow advice on how to conduct a first research project. • Unlike most texts with hypothetical examples, this text—with real examples written by a variety of published researchers—makes research methods come alive. Students see how research methods are used to explore important, contemporary problems. • Factual Questions at

the end of each chapter help students review key concepts covered in the chapters. • Questions for Discussion encourage students to consider specific techniques and strategies that they might use while conducting their research. Writing for Psychology Christopher J. Thaiss 2000 This book thoroughly explains writing as a four-step process involving writing as a tool for thinking and learning, drafting, revising, and editing. The authors provide explicit instruction along with annotated student samples of the experimental lab report, the term paper, and the exam essay. Samples also help to explain effective note taking, annotation of research materials, the keeping of reading-response and research logs, and methods of varying written style. Readers learn how to plan their written projects and how to seek and receive good

advice on revising drafts. The book also includes a section on dealing with the most common errors in grammar, punctuation, and spelling as well as a concise guide to APA style.
