**Document Control System Building** Alyssa Batliner 2021-06-09 Document management is the process of handling documents in such a way that information can be created, shared, organized, and stored efficiently and appropriately. As such, learning how to create a document management system is critical for businesses. Many businesses deal with high-stakes information that needs to be kept secure and private or accessed quickly. In such instances, a smoothly operating document management system is essential. But even if your business is of a more casual nature, it is still important to keep proper records for accounting and for the sake of efficiency. This book explains the requirements for compliance with FDA regulations and ISO standards (9001/13485) for documented information controls and presents a methodology for compliance. A well-developed document control system benefits business by: -Improving knowledge retention and knowledge transfer within and across business units -Improving access to knowledge-based information -Improving employee performance by providing standardized processes and communicating clear expectations -Improving customer communication and satisfaction by providing documented information from which common understanding can be achieved -Providing traceability of activities and documentation throughout the organization -Improving organization of and access to documents and data Buy this book now.
