Real World Microsoft Access Database

Protection and Security Garry Robinson
2008-01-01 Author Garry Robinson approaches this book differently than other Access books on the market: he keeps the focus on issues that will help protect your database. Written from an experienced developers point of view, he discusses protection and security task-by-task. This book is even recommended among Microsoft TechNet Security Topics: Threats and Countermeasures. You'll learn to hide tables as system tables, produce databases that are difficult to crack, and back up databases. You will learn how to keep staff from viewing salary tables, prevent customers from peeking at your distributed software design, and become a better judge of worthwhile security options (versus time-consuming choices).

DB2 Universal Database and SAP R/3 Version 4
Diane Bullock 1999 "Artful Making" offers the first proven, research-based framework for engineering ingenuity and innovation. This book is the result of a multi-year collaboration between Harvard Business School professor Robert Austin and leading theatre director and playwright Lee Devin. Together, they demonstrate striking structural similarities between theatre artistry and production and today's business projects--and show how collaborative artists have mastered the art of delivering innovation "on cue," on immovable deadlines and budgets. These methods are neither mysterious nor flaky: they are rigorous, precise, and--with this book's help--absolutely learnable and reproducible. They rely on cheap and rapid iteration rather than on intensive up-front planning, and with the help of today's enabling technologies, they can be applied in virtually any environment with knowledge-based outputs. Moreover, they provide an overarching framework for leveraging the full benefits of today's leading techniques for promoting flexibility and innovation, from agile development to real options.
