Consumer Lending in Theory and Practice Petr Těplý 2016-01-01 This book deals with consumer lending from both theoretical and empirical points of view. In the theoretical section, it book analyses the wider context of financial literacy, household indebtedness and the global consumer credit market including relevant legal, regulatory and risk management issues. In the empirical section, the book uses The Navigator of Responsible Lending as an evaluation tool to assess both bank and non-bank consumer credit providers in the Czech Republic. Although our empirical research is done as a case study on the Czech Republic, its basic ideas might be easily applied to other countries as well. Enclosures to the book include additional texts relevant to consumer lending (including case studies and an unofficial English translation of the Czech Consumer Credit Act) and therefore provide the reader with several perspectives on the topic.

The State of Open Data Tim Davies 2019-05-22 Its been ten years since open data first broke onto the global stage. Over the past decade, thousands of programmes and projects around the world have worked to open data and use it to address a myriad of social and economic challenges. Meanwhile, issues related to data rights and privacy have moved to the centre of public and political discourse. As the open data movement enters a new phase in its evolution, shifting to target real-world problems and embed open data thinking into other existing or emerging communities of practice, big questions still remain. How will open data initiatives respond to new concerns about privacy, inclusion, and artificial intelligence? And what can we learn from the last decade in order to deliver impact where it is most needed? The State of Open Data brings together over 60 authors from around the world to address these questions and to take stock of the real progress made to date across sectors and around the world, uncovering the issues that will shape the future of open data in the years to come.

Economic and Environmental Regulation of International Aviation Steven Truxal 2016-12-01

The core structure of the regulatory regime for international civil aviation (the 'Chicago System') is inter-national. The features of the Chicago System were designed in an era when the world's airlines were State-owned, and the most pressing international concerns were for navigation and safety regulation. Economic liberalization and intense globalization since the Second World War have impacted on the industry; today, it is global. This book observes the developing governance of global aviation, taking into account the concepts of sovereignty, jurisdiction and territoriality, and the proliferation of actors and participants as partners in a global public policy network, to posit that an upgraded system of global governance for civil aviation helps to explain the emerging complex landscape for global governance of civil aviation. As evidence of the emerging, complex matrix of governance of global aviation, this book identifies and reviews a selection of contemporary, transnational economic and environmental challenges facing the globalized aviation sector, e.g. fair competition safeguards, consumer protection, noise pollution and greenhouse gas emissions, and the respective 'legal' and policy actions taken at national level (United Arab Emirates, Qatar and People's Republic of China), regional level (the European Union) and international level (UN Framework Convention on Climate Change and International Civil Aviation Organization). The book concludes that economic and environmental regulation of international aviation, designed for an inter-national world of yesterday, evolves into global governance of aviation, which is more suited for today's global world. This book will be of particular interest to scholars and practitioners of aviation law, competition law and environmental law, as well as in the areas of

transnational law, global governance and international relations.

Mega Quakes: Cascading Earthquake Hazards and Compounding Risks Katsuichiro Goda

2018-03-15 Large-scale earthquake hazards pose major threats to modern society, generating casualties, disrupting socioeconomic activities, and causing enormous economic loss across the world. Events, such as the 2004 Indian Ocean tsunami and the 2011 Tohoku earthquake, highlighted the vulnerability of urban cities to catastrophic earthquakes. Accurate assessment of earthquake-related hazards (both primary and secondary) is essential to mitigate and control disaster risk exposure effectively. To date, various approaches and tools have been developed in different disciplines. However, they are fragmented over a number of research disciplines and underlying assumptions are often inconsistent. Our society and infrastructure are subjected to multiple types of cascading earthquake hazards; therefore, integrated hazard assessment and risk management strategy is needed for mitigating potential consequences due to multi-hazards. Moreover, uncertainty modeling and its impact on hazard prediction and anticipated consequences are essential parts of probabilistic earthquake hazard and risk assessment. The Research Topic is focused upon modeling and impact assessment of cascading earthquake hazards, including mainshock ground shaking, aftershock, tsunami, liquefaction, and landslide.
