*Biotechnology* Susan R. Barnum 1998 Biotechnology encompasses the processes and methods used to manipulate living organisms or the substances and products from these organisms for medical, agricultural, and industrial purposes. Barnum not only supplies the big picture of the biotechnology field, but provides in-depth details to illustrate the technology. Traditionally, biotechnology texts have been too narrow in coverage and focused only on the methods used in biotechnology. In contrast, Barnum's text extensively covers the topics, with lots of examples and case studies, and discusses the implications in areas such as gene therapy, medicine, agriculture, marine biology, and forensics.

Designed to grab the interest of students and make the topics relevant to them, Barnums text is an excellent integration of historical and modern biotechnology topics.
