Solving PDEs in C++ Yair Shapira 2012-06-07 In this much-expanded second edition, author Yair Shapira presents new applications and a substantial extension of the original object-oriented framework to make this popular and comprehensive book even easier to understand and use. It not only introduces the C and C++ programming languages, but also shows how to use them in the numerical solution of partial differential equations (PDEs). The book leads readers through the entire solution process, from the original PDE, through the discretization stage, to the numerical solution of the resulting algebraic system. The high level of abstraction available in C++ is particularly useful in the implementation of complex mathematical objects, such as unstructured mesh, sparse matrix, and multigrid

This book will provide a comprehensive source of information for space specialists and others having a close interest in European space affairs. Written by an acknowledged expert and former space agency official, the work opens up a vital component of Europe's technostructure and the world's space programs. Its mass of information will serve the insider as a handy reference while its lively analysis will assist public

judgment of European space efforts. The book first explores the Space Age's origins and Europe's response up to the 1970s. It then devotes its bulk to the present scene by investigating ESA, Eutelsat, Arianespace, Eumetsat, ASTRA, national agencies and other bodies. How this scene works, what has been achieved, how space technology is made and used and how policy is formed are main concerns, but of interest too are various crises, including recently Europe's man-in-space program. The book identifies challenges for the space community, business, and the EU and how they may be met.
