## **A Critical Analysis of the Representation of Female Body Image in Women Magazines**

Asheida Charles 2016-01-14 Seminar paper from the year 2014 in the subject Communications - Mass Media, grade: 94%, Communication University of China (Institute of Communication Studies), course: Theories of Communication, language: English, abstract: The purpose of this paper is to examine and criticize the representation of female body image by mass media. For decades the bodies of women have been tailored to highlight products and services by advertisers and owners of the media as a means of generating capital gains. This tailoring, has led to what many have come to accept as the 'ideal image of beauty' that every woman should endeavor to achieve. This paper continues the discussion on a topic that is widely and frequently discussed. The theoretical framework that this paper employs is based on one of the most applauded theory in communication studies; The Political Economy of Communication and Media theory, which was first coined by Dallas William Smythe. This theory is pertinent to understand the presence of the commercial forces behind creating and maintaining this ideal body image, particularly by advertisers in mass media. The form of mass media that this paper concentrates on is women's magazine, with specific focus on advertisements regarding beauty and cosmetic products/services. Additionally, case studies in the US and China are used to depict the influence mass media representation of female body image on women.

**Communications Research in Action** Philip M. Napoli 2011-02-01 A synergy between academia and activism has long been a goal of

both scholars and advocacy organizations in communications research. The essays in *Communications Research in Action* demonstrate, for the first time in one volume, how an effective partnership between the two can contribute to a more democratic public sphere by helping to break down the digital divide to allow greater access to critical technologies, democratizing the corporate ownership of the media industry, and offering myriad opportunities for varied articulation of individuals' ideas. Essays spanning topics such as the effect of ownership concentration on children's television programming, the media's impact on community building, and the global consequences of communications research will not only be valuable to scholars, activists, and media policy makers but will also be instrumental in serving as a template for further exploration in collaboration.

Theo Araujo 2025-10-01 Media and communication have become ubiquitous in today's societies and affect all aspects of life. On an individual level, they impact how we learn about the world, how we entertain ourselves, and how we interact with others. On an organisational level, the interactions between media and organisations, such as political parties, NGOs, businesses and brands, shape organisations' reputation, legitimacy, trust and (financial) performance, as well as individuals' consumer, political, social and health behaviours. At the societal level, media and communication are crucial for shaping public opinion on current issues such as climate change, sustainability, diversity, and well-being. Media challenges are widespread and include mis- and disinformation, the negative impact of algorithms on our information diets, challenges to our privacy, cyberbullying, media addiction, and unwanted persuasion, among many others. All this makes the study of media and communication crucial. This book provides a broad overview of the ways in which people create, use, and experience their media environment, and the role of media and communication for individuals, organisations, and society. The chapters in the book were written by researchers from the Amsterdam School of Communication Research (ASCoR) on the occasion of its 25th anniversary. ASCoR is today the largest research institute of its kind in

Europe and has developed over the past 25 years into one of the best communications research institutes in the world. |Cutting edge research on the digital society, concise, broad and thorough at the same time, internationally renowned authors.

**Strategic Sport Communication** Paul Mark Pedersen 2007 This is an introduction to the wide-ranging world of sport communication, integral to the successful management, marketing, and operation of sport organisations at all levels. The text outlines the full breadth of the communication industry, including the many professional careers available to students and practitioners.

Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities

related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version.
