At the Borders of Movement, Art, and Neurosciences Guy Cheron 2025-12-10 This new Research Topic is dedicated to publishing high-quality scholarly papers on pivotal topics in the interactive field of Art, Movement, and Neuroscience. Our primary aim is to spotlight recent breakthroughs in Neuro-aesthetics that will help better understand the inherent complexity consisting of the brain mechanisms involved during artistic experiences in the widespread sense, including the production of art pieces and aesthetic appreciation. The interest in these discoveries should also enrich the field of connoisseurship to better understand the neural factors involved in the scientific expertise of artworks. These complex behaviors integrated into different cultures largely depend on the interaction of at least five non-exclusive fundamental fields of investigation: - 1. Oculomotor skills, 2. Vision, 3. Emotion, 4. Decision-making, and 5. Oscillatory dynamics of the brain.

Functional safety of machine controls Hauke, M. 2019-08-20 The EN ISO 13849-1 standard, "Safety of machinery - Safety-related parts of control systems", contains provisions governing the design of such parts. This report is an update of BGI Report 2/2008e of the same name. It describes the essential subject-matter of the standard in its third, revised 2015 edition, and explains its application with reference to numerous examples from the fields of electromechanics, fluidics, electronics and programmable electronics, including control systems employing mixed technologies. The standard is placed in its context of the essential safety requirements of the Machinery Directive, and possible methods for risk assessment are presented. Based upon this information, the report can be used to select the required Performance Level PLr for safety functions in control systems. The Performance Level PL which is actually attained is explained in detail. The requirements for attainment of the relevant Performance Level and its associated Categories, component reliability, levels of diagnostic coverage, software safety and measures for the prevention of systematic and common-cause failures are all discussed comprehensively. Background information is also provided on implementation of the requirements in real-case control systems. Numerous example circuits show, down to component level, how Performance Levels a to e can be engineered in the selected technologies

with Categories B to 4. The examples provide information on the safety principles employed and on components with well-trying safety functionality. Numerous literature references permit closer study of the examples provided. The report shows how the requirements of EN ISO 13849-1 can be implemented in engineering practice, and thus makes a contribution to consistent application and interpretation of the standard at national and international level.
