Crafting a Compiler Charles N. Fischer 2010 *Crafting a Compiler* is an undergraduate-level text that presents a practical approach to compiler construction with thorough coverage of the material and examples that clearly illustrate the concepts in the book. Unlike other texts on the market, Fischer/Cytron/LeBlanc uses object-oriented design patterns and incorporates an algorithmic exposition with modern software practices. The text and its package of accompanying resources allow any instructor to teach a thorough and compelling course in compiler construction in a single semester. An ideal reference and tutorial

Crafting a Compiler with C Charles N. Fischer 1991-01-01 This extremely practical, hands-on approach to building compilers using the C programming language includes numerous examples of working code from a real compiler and covers such advanced topics as code generation, optimization, and real-world parsing. It is an ideal reference and tutorial. 0805321667B04062001

The Craft of Prolog Richard O'Keefe 2009-12-07 The emphasis in *The Craft of Prolog* is on using Prolog effectively. It presents a loose collection of topics that build on and elaborate concepts learned in a first course. Hacking your program is no substitute for understanding your problem. Prolog is different, but not that different. Elegance is not optional. These are the themes that unify Richard O'Keefe's very personal statement on how Prolog programs should be written. The emphasis in *The Craft of Prolog* is on using Prolog effectively. It presents a loose collection of topics that build on and elaborate concepts learned in a first course. These may be read in any order following the first chapter, "Basic Topics in Prolog," which provides a basis for the rest of the material in the book. Richard A. O'Keefe is Lecturer in the Department of Computer Science at the Royal Melbourne Institute of Technology. He is also a consultant to Quintus Computer Systems, Inc. Contents: Basic Topics in Prolog. Searching. Where Does the Space Go? Methods of Programming. Data Structure Design. Sequences. Writing Interpreters. Some Notes on Grammar Rules. Prolog Macros. Writing Tokenisers in Prolog. All Solutions.

The Art and Craft of Computing Stefano Ceri 1998 Gives students a firm rooting in the fundamental principles of computer science, and an appreciation of the correlation between those principles and an introduction to programming. Maintains strong coverage of the topics taught in the traditional introductory courses including algorithms and basic elements of programming languages and then goes further to introduce higher level topics such as the structures of operating systems, databases and productivity tools.

Compiler Compilers Dieter Hammer 1991-02-12 Advances and problems in the field of compiler compilers are considered in this volume, which presents the proceedings of the third in a series of biannual workshops on compiler compilers. Selected papers address the topics of requirements, properties, and theoretical aspects of compiler compilers

as well as tools and metatools for software engineering. The 23 papers cover a wide spectrum in the field of compiler compilers, ranging from overviews of new compiler compilers for generating quality compilers to special problems of code generation and optimization. Aspects of compilers for parallel systems and knowledge-based development tools are also discussed.

Computer Literature Bibliography W. W. Youden 1965

Computational Differentiation M. Berz 1996 This volume encompasses both the automatic transformation of computer programs as well as the methodologies for the efficient exploitation of mathematical underpinnings or program structure.
