*Oxford Textbook of Old Age Psychiatry* Tom Denning 2021

Part of the authoritative Oxford Textbooks in Psychiatry series, *Oxford Textbook of Old Age Psychiatry*, Third Edition has been thoroughly updated to reflect the developments in old age psychiatry since publication of the Second Edition in 2013, and remains an essential reference for anyone interested in the mental health care of older people.

*Wildland Fire Behaviour* Mark A. Finney 2021-11 Wildland fires have an irreplaceable role in sustaining many of our forests, shrublands and grasslands. They can be used as controlled burns or occur as free-burning wildfires, and can sometimes be dangerous and destructive to fauna, human

communities and natural resources. Through scientific understanding of their behaviour, we can develop the tools to reliably use and manage fires across landscapes in ways that are compatible with the constraints of modern society while benefiting the ecosystems. The science of wildland fire is incomplete, however. Even the simplest fire behaviours - how fast they spread, how long they burn and how large they get - arise from a dynamical system of physical processes interacting in unexplored ways with heterogeneous biological, ecological and meteorological factors across many scales of time and space. The physics of heat transfer, combustion and ignition, for example, operate in all fires at millimetre and millisecond scales but wildfires can become conflagrations that burn for months and exceed millions of hectares. *Wildland Fire Behaviour: Dynamics,*

Principles and Processes examines what is known and unknown about wildfire behaviours. The authors introduce fire as a dynamical system along with traditional steady-state concepts. They then break down the system into its primary physical components, describe how they depend upon environmental factors, and explore system dynamics by constructing and exercising a nonlinear model. The limits of modelling and knowledge are discussed throughout but emphasised by review of large fire behaviours. Advancing knowledge of fire behaviours will require a multidisciplinary approach and rely on quality measurements from experimental research, as covered in the final chapters.

**Health Extension** Cheryl L. Eschbach 2024-12-01 Health Extension: Community-Based Healthcare and the Future of Cooperative Extension explores innovation in extension health programs, engaged scholarship promoting research-based information in communities, and the evaluation and

documentation of community programs and their impacts. This volume provides land-grant and university-based colleagues up-to-date information on using the Cooperative Extension System (CES) for community engagement in healthcare while also familiarizing those outside CES and the academy with a roadmap for improvement. The contributions of a diverse array of scholars challenge the status quo in extension programs by characterizing the introspection, understanding, creativity, partnerships, and leadership that will be required to improve lives and communities in the twenty-first century. This perspective underscores the role of CES as foundational to the future of Health Extension and offers an alternative to approaches that utilize the CES as a model without the accompanying advantages of history, community embeddedness, and sustainability.

*Model Uncertainties in  
Foundation Design* Chong Tang  
2021-03-16 Model

Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date, covering many foundation types (shallow

foundations, spudcans, driven piles, drilled shafts, rock sockets and helical piles) and a wide range of ground conditions (soil to soft rock). All databases with names prefixed by NUS are available upon request. This book presents a comprehensive evaluation of the model factor mean (bias) and coefficient of variation (COV) for ultimate and serviceability limit state based on these databases. These statistics can be used directly for AASHTO LRFD calibration. Besides load test databases, performance databases for other geo-structures and their model factor statistics are provided. Based on this extensive literature survey, a practical three-tier scheme for classifying the model uncertainty of geo-structures according to the model factor mean and COV is proposed. This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding - a concept already adopted in the

Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 (EN 1997-1:202x). The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal.
