2016-11-30 The recent widespread use of mobile  
Internet together with the advent of numerous  
smart applications has led to the explosive  
growth of the mobile data traffic in the last few  
years. This momentum of mobile traffic will  
continue due to the emerging needs of  
connecting people, machines, and applications  
through mobile infrastructure. As a result, the  
current and projected dramatic growth of mobile  
data traffic necessitates the development of fifth-  
generation (5G) mobile communications  
technology. As a result, there is significant  
interest in the development of innovative  
backhaul and fronthaul solutions for ultra-dense  
heterogeneous networks. This book brings  
together mobile stakeholders from academia and  
industry to identify and promote technical  
challenges and recent results related to smart  
backhaul/fronthaul research for future  
communication system such as 5G. Moreover, it  
presents a comprehensive analysis on different  
types of backhaul/fronthaul technology and  
topology. It considers already available topology  
for backhauling/fronthauling and explains all

fundamental requirements for deploying future  
smart and efficient backhauling/fronthauling  
infrastructure from an architectural, technical  
and business point of view and presents real life  
applications and use cases. Expanding on  
standardization activities, this book consists of  
multiple channels on specific research topics.  
The chapters are logically organized as the  
authors approach the subject from overview to  
specifics and from a lower to higher layer  
direction.
