

Cardiovascular System Of The Rabbit

New Aspects of the Role of Adrenoceptors in the Cardiovascular System H. Grobecker 2012-12-06 This volume is the product of a symposium held on 14-16 February, 1985 in Hamburg in honour of the 65th birthday of Prof. Hans-Joachim Schumann. Schumann was born on 28 December, 1919 in Stralsund. He studied medicine in Cologne, Greifswald and Rostock. The chair of pharmacology in Rostock was held at that time by Peter Holtz. It was he who first introduced Schumann to pharmacology in 1944 and who was his Doktorvater (research supervisor). After the war, Schumann again worked with Holtz in Rostock and then in Frankfurt am Main. He received decisive stimuli during a research fellowship, in 1956, in Prof. J.H. Burn's department in Oxford, where he also worked with Prof. H. Blaschko. In 1964 he accepted his present position as ordentlicher (full) Professor and Head of the Institute of Pharmacology and Toxicology of the then newly founded Medical Faculty of Essen. He has remained in Essen despite being offered the chair of pharmacology in Göttingen in 1968. It is interesting to observe how in the main lines of his scientific work, which now spans 40 years, Schumann has followed the steps involved in autonomic neuro transmission from transmitter release to transmitter-receptor interaction.

The Heart and Cardiovascular System Harry Allen Fozzard 1986

Cardiovascular System Dynamics Jan Baan 1978 This book offers a novel approach to the study of the mammalian cardiovascular system. Instead of focusing on a particular part of the system or on a particular group of techniques, or approaching the system from a particular point of view, it stresses a balanced presentation of ideas: —all the major component parts of the system are discussed, as well as the behavior of the system as an integrated whole —both basic and clinical viewpoints are represented —both detailed analysis and comprehensive synthesis are offered. In addition, trends in modern instrumentation and the use of computers in improving patient care are important and recurrent themes. Spirited discussions of current controversies and philosophies highlight the presentations. The 62 papers in this volume were invited for a major international conference, held in April 1975, which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society. The conference brought together outstanding researchers in the life sciences (biology, physiology, medicine) and the physical sciences (biophysics, bioengineering) in order to integrate their findings more intricately and to chart the present state and future directions of the field. Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine, the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort. The papers are organized into 12 sections. The first 9 offer a tour of the cardiovascular system, with papers arranged within each section to lead the reader from theoretical to clinical viewpoints. Included are sections on cardiac muscle, coronary circulation, ventricular dynamics, systemic arterial tree, microcirculation, systemic veins, pulmonary vasculature, control mechanisms in specific vascular beds, and cardiovascular system control. The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis.

Handbook of Physiology Ernest Page 2002 This volume continues the tradition of thoughtful, in-depth

examination of critical subjects in the Handbook of Physiology, though the molecular revolution has transformed cardiovascular research from a stable, mature field into one that is exploding with new findings. The 21 chapters were written by outstanding international investigators in the fields of cell structure, muscle contraction and control, and electrophysiology. They cover basic molecular events but highlight the strong relationships to physiological processes that will soon be important in cardiovascular disease. In the discussions of structure, the emphasis is on normal and abnormal growth as well as the dynamic properties of cell communication via gap junctions. Muscle function is explored from actin-myosin molecular interactions to control of intracellular calcium and contraction by its principal transporters. The book shows how cardiac electrophysiology integrates the whole heart from cellular action potentials and conduction to mathematical models. Current concepts of ion channel structure and function and the heterogeneous distribution and expression of these channels are detailed. The heart as a malfunctioning organ is considered in chapters on arrhythmias, ventricular function, and heart failure. The chapters are extensively referenced and focus on the critical questions in basic cardiology for physiologists to address in the future, drawing on the power of molecular studies and the genome map.
