Transport Economics Cameron Elliott Gordon 2025-08-08 This book takes an interdisciplinary, institutional, and historically informed approach to the economics of transport, providing a more nuanced and complete understanding of human transport choices, individually and collectively, and the related choice of location, including the formation of cities. The first principles of standard economic theory – referred to here as the core model – are systematically analysed, with a particular focus on the strengths and weaknesses of the simplifying assumptions used. The economic dynamics of modern transport systems are explored in light of theory and practice, covering such topics as the role of incentives, technological change and economic growth, and the enabling role that transport plays in productivity. Many historical and present-day examples are provided to explore the real-world nuance and subtlety that crops up repeatedly in transport activity, using additional disciplinary lenses such as planning, engineering, psychology, and sociology. Overall, the book examines the implications of the unique particularities of human beings, including the quirks of their psychologies and physical bodies, for transport planning, development, and implementation. A focus is kept on the “real world” policy complications that arise so frequently in the transport arena. The book, while aimed at university students, will also appeal with its holistic, thoughtful approach to researchers interested in transport, urban planning, and its effective delivery. Policy-makers and practitioners seeking a broad overview of the field beyond their specialisations will also enjoy this book.

The Way We Build Mark Erlich 2023-07-18 The construction trades once provided unionized craftsmen a route to the middle class and a sense of pride and dignity often denied other blue-collar workers. Today, union members still earn wages and benefits that compare favorably to those of college graduates. But as union strength has declined over the last fifty years, a growing non-union sector offers lower compensation and more hazardous conditions, undermining the earlier tradition of upward mobility. Revitalization of the industry depends on unions shedding past racial and gender discriminatory practices, embracing organizing, diversity, and the new immigrant workforce, and preparing for technological changes. Mark Erlich blends long-view history with his personal experience inside the building trades to explain one of our economy's least understood sectors. Erlich's multifaceted account includes the dynamics of the industry, the backdrop of union policies, and powerful stories of everyday life inside the trades. He offers a much-needed overview of construction's past and present while exploring roads to the future.
