## **Dynamics of Meteor Outbursts and Satellite**

**Mitigation Strategies** Glenn  
E. Peterson 1999 The potential  
threat posed by Leonid  
meteoroids to orbiting  
spacecraft over the next  
several years calls for new  
dynamic mitigation strategies  
to assist the satellite  
community in reducing the  
danger to its vehicles. This  
book offers deliberate dynamic  
mitigation strategies to  
complement the traditional  
shielding strategies, providing  
mission operators additional  
ways to decrease the danger.  
Five different attitude control  
and orbit maneuvering options  
are examined in detail. The  
information is presented in  
algorithmic form to allow

technically competent, but  
meteoroid inexperienced,  
operators to easily understand  
the phenomena, assess the  
danger, and implement  
procedures. Although general  
in scope, the book emphasizes  
the Leonid meteor events of  
the 1998-2002 timeframe.

### **Third Forest Vegetation Simulator Conference 2008**

The Forest Vegetation Simulator (FVS) is a suite of computer modeling tools for predicting the long-term effects of alternative forest management actions. FVS was developed in the early 1980s and is used throughout the United States and British Columbia. The Third FVS

conference, held February 13-15, 2007, in Fort Collins Colorado, contains 20 papers. They describe the use of FVS on the stand and landscape scale, and to analyze fuels management in the presence of insects and fire. Several papers compare FVS predictions of the effects of insects and disease to field measurements. FVS is continually evolving and improving in technology and capability to meet the needs of its ever increasing user community. Papers describe new methods for data acquisition and preparation for input to FVS, new economic analysis capabilities within FVS, new methods for simulating forest regeneration, new developments in calculating growth and mortality, and future plans for incorporating the effects of climate change in model simulations.
