Atoms, Molecules & Elements Gr. 5-8 George Graybill 2007-09-01 Young scientists will be thrilled to explore the invisible world of atoms, molecules and elements. Our resource makes the periodic table easier to understand. Begin by answering, what are atoms? See how the atomic model is made up of electrons, protons and neutrons. Find out what a molecule is, and how they differ from elements. Then, move on to compounds. Find the elements that make up different compounds. Get comfortable with the periodic table by recognizing each element as part of a group. Examine how patterns in the period table dictate how those elements react with others. Finally, explore the three important kinds of elements: metals, nonmetals and inert gases. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

Electrons and the Nucleus Advanced Physics Project for Independent Learning 1980 Teacher's guide to accompany one of four second-year units of APPIIL (the Advanced Physics Project for Independent Learning). "This ILEA project has produced materials which will enable students to study independently for much of their time, so that teachers can concentrate on giving individual help where it is needed. The materials can be used with any of the A-level physics syllabuses, except the Nuffield Advanced Physics scheme. The teacher's and student's handbooks give information about the whole course. The course consists of ten units, six for the first year and four for the second year, each covering about six weeks' work. Four units are possible alternative starting points for the course, and have preliminary sections for testing students' understanding of relevant pre-knowledge. ... There are many possible routes through the course, which are outlined in the handbooks. Each unit has a student's guide and a teacher's guide. The student's guides define objectives, suggest activities, encourage students to use constructively other resources such as textbooks, and give instructions for experiments. Many questions of different types are included to help students learn new work and test themselves on their understanding and retention of earlier work. The teacher's guides provide notes on the contents of each unit, and reference information." (ILEA catalogue).
